Atos and the Games embracing Digital Transformation

Turning the event into a global and fully connected experience

Long-term
relationship
based on trust and
proven performance since

Barcelona
1992

End User Experience

1992: Statistic information for the the press only on dedicated kiosks
2016: Video integrated with real time data available to end user

Olympic Information:

1992: One application per type of users
2016: Common data-model supporting all the applications

Infrastructure:

1992: First client/server architecture
2016: Cloud enabled IT

Contract for the provision of IT Services
for the IOC extended **until 2024**

RIO 2016

* The Rio 2016 cloud computing solution is delivered in partnership with Atos, Embratel, Cisco and EMC.

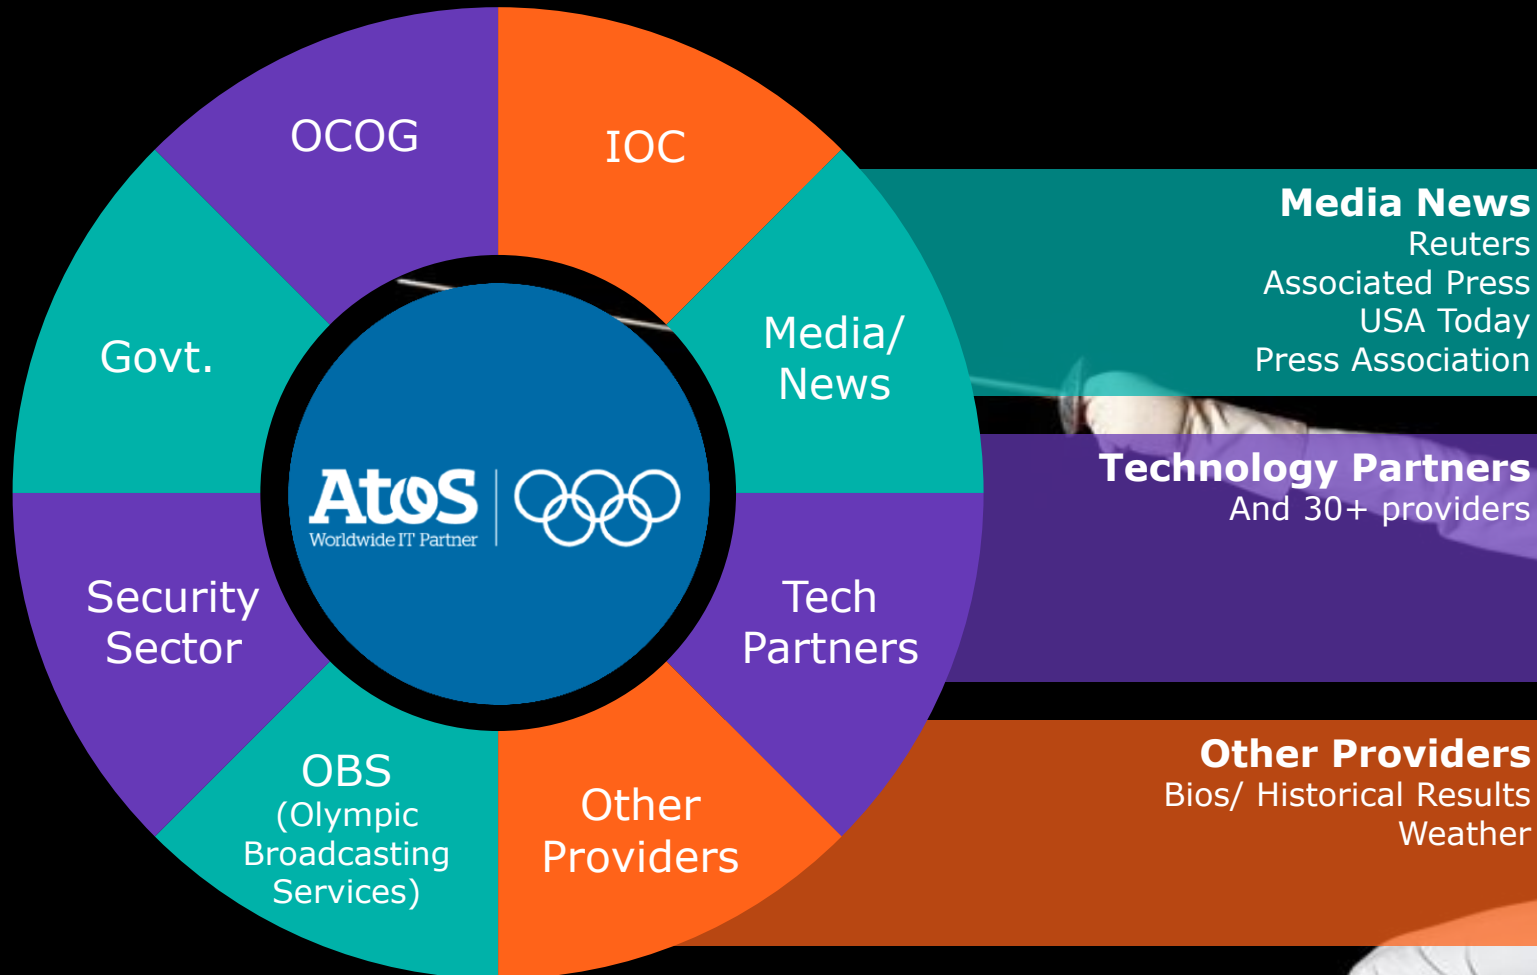

Over 4 years of preparation: For 3 weeks peak time

Onsite staff*

*IT resources (including volunteers, committee and partners)

One team: One goal

Ensuring key systems are in place: Before...

Games Management System

Volunteer portal

Supporting Rio2016 recruit up to **70,000** volunteers

Sport entries & qualifications

Collects and processes data for each of the **14,700** athletes eligible to compete in the Games

Accreditation

Identifies accredited participants, manages registration, assigns access privileges and provides access control information for **300,000** people

Workforce management

At work long before the Games start, support the HR departments with all functions needed for managing interviewing and training staff and volunteers

Ensuring key systems are in place: During

Information Diffusion System

This group of systems delivers real-time results to the media and the Olympic family.

This includes the Commentator Information System and myInfo+

- **myInfo+** – This internet application enables accredited media, sports officials and athletes to access information such as schedules, transport news and sports records.
- **Commentator Information System (CIS)** – The CIS provides commentators and journalists with touch-screen technology that gives results in real time, so quick they can see the results before they hear the roar of the crowd. The Remote CIS system service enables commentators to access the same competition results from the studios in their home countries in a fraction of a second.

But we go beyond. We see step changes in how disruptive technologies – Complex Data, Cloud and Cyber Security - address emerging challenges and make a major impact.

**What is new
Rio 2016**

Real-time Complex Data analytics for safe-keeping the Games

Rio2016

Key facilitator in the transition

Rio represents a new transition to the new delivery model for the Games

from built each time to built once - centralising integration, implementation and support functions

Exploiting new digital technological advances and efficiencies

Still minimizing risk within the Games environment

Re-use specialist Games expertise with Games specific procedures and technologies – delivering high quality while tightly containing cost

The Lab
