

managing complex IT solutions to get ahead of the competition

Your business technologists. Powering progress

Atos

Global IT Outsourcing at a glance

Managing your IT infrastructure so you can focus on your core competencies.

Technology is vital to every organization. However, managing that technology seemingly becomes more complex every day. Our IT Outsourcing (ITO) solutions relieve businesses and government entities from that burden, enabling our clients to increase efficiencies, reduce operating costs and gain a competitive advantage through technology.

Our specialty is the design, development and delivery of flexible IT solutions, mapped to our individual clients' needs and standards. Our world-class infrastructure is supported by 15 data centers located worldwide, with Enterprise Command Centers (ECCs) in the United States, Mexico and India. Our proven results have earned us awards and industry recognition. More importantly, they've had a positive impact on our clients' success.

We offer an extensive Global IT Services portfolio to enable our customers to reduce costs, optimize availability and achieve measurable results.

Technology Infrastructure and Transformation Services

Technology Infrastructure and Transformation Services leverage our worldwide network of data centers, helpdesks and managed storage facilities to keep your daily operations up and running. We use our resources, expertise and vast technological investment to support our clients in a variety of ways. These include hosting, mainframe management, helpdesk / service desk management and enterprise storage, as well as desktop outsourcing and network services. Additionally, Atos offers a Remote Infrastructure Management option, where you retain control of your IT assets but engage Atos to manage that infrastructure remotely.

Advanced Technology Solutions

At Atos, we realize that a managed solution isn't always an option. Our Advanced Technology Solutions provide a number of prepackaged technology offerings that our clients can deploy in their in-house environments. We have partnered with several leading hardware, software and telecom companies to create this solution portfolio, which includes options for business continuity, storage, desktop strategy and unified communications.

These packages solve some new, emerging business challenges. For example, Atos' telecom solutions include an option for expense management, enabling you to reduce costs by taking advantage of preferential telecom rates and more effective asset management.

Our power management solution is a part of our Green IT portfolio, designed to help you effectively manage the energy consumption of every networked PC.

Innovation and cloud

Web 2.0 has ushered in an era of virtualization, on-demand IT services, increased automation and service integration. In response, Atos has created AMP Management Platform consolidated service delivery into a unified, standardized ITIL V3.0-capable platform that will serve as the foundation for new innovation and cloud offerings, including the following:

- ▶ **Virtualization** – our virtualization services enable you to increase bandwidth, storage and server capacity by optimizing resources within your IT infrastructure. Our virtual desktop solutions also enable you to centralize desktop management to reduce costs
- ▶ **Enterprise cloud** – our secure cloud offerings enable customers to increase server, storage, and network capacity on demand, using a web-based, self-service tool, lowering costs and reducing procurement times from weeks to 24 hours. Services can be delivered through the best combination of public and private cloud resources.
