

TEMPPO Designer V16.4.1 - Release Notes

- Separate Excel Conversion Macro for ESA Projects
 - Since projects in the scope of the European Space Agency have specific requirements regarding the Excel format of exported test cases, a separate version of the macro file “FormatTestCases_ESA.xlsm” is now provided in addition to “FormatTestCases.xlsm”.
- Bug fixes – Interface to TEMPPO Test Manager
 - Due to a defect in the Microsoft classes, only 1 byte at a time was read via the socket interface, resulting in poor performance.
 - The XML structure of TEMPPO Designer projects was incorrectly parsed when received via the interface (especially the XML_ELEMENT tags).
- Bug fix – Task Properties Editor
 - In the German version of the GUI, the fields “Description” and “Postcondition” were interchanged.
- Bug fix – Export of Building Block Info
 - No information was exported for “loop” task steps assigned to a data set
