creating
a secure enterprise
where innovation can flourish

Integrating Identity and Access Management with Atos Product Lifecycle Management

Enabling teamwork: the challenge
An effective, enterprise-wide Product Lifecycle Management (PLM) system is essential to drive innovation and help companies get successful products to market faster. As the world's most widely deployed PLM software solution, Teamcenter® is designed to meet these challenges and enable effective collaboration. But because PLM touches every part of the organization, it is vital to balance easy access to information with security, compliance and legal requirements.

The product lifecycle process typically involves a wide range of people – not only company employees, but also partners, suppliers and perhaps customers. Smooth collaboration requires that all participants have direct access to the applications and information they need over an IT network. It's important that this ease-of-access doesn't put security at risk – particularly of the PLM system itself.

Many companies use Teamcenter® and other applications to manage employees and external users differently and independently of each other. However, this can make it costly to maintain up-to-date, high quality data records. Often, maintenance processes and changes to access rights are initiated by telephone and not documented. This can result in orphaned accounts when the rights of employees that leave the company or external partners are not revoked in keeping with the rules. In such cases it can be impossible to track which user was granted what access and when.

Create and maintain a secure IT environment that promotes effective collaboration and teamwork between employees, suppliers and customers.

Your business technologists. **Powering progress**

Atos

Functionality	Function Packages	Benefits
Integration with HR / CRM Automated provisioning	DirX for Teamcenter User Lifecycle Assistant	Lower overall costs for user management
Self-service / Delegated administration Role management Access certification Identity audit	DirX for Teamcenter Compliance Assistant	Increased security and efficiency Enhanced regulatory compliance Transparency and traceability
