

Integrated Report 2020

Atos

This Integrated Report provides a comprehensive snapshot of the financial and non-financial performance of Atos in 2020. This is the third annual Integrated Report, in which Atos sets out its vision, strategy, business model, governance and main financial and non-financial achievements of the year.

In this document, we share our vision of digital transformation with purpose, our strategy and our business model for creating value for our stakeholders through financial, environmental and societal achievements.

These achievements include our ambitious commitment to reaching net-zero carbon emissions as soon as 2028, on scopes 1-2-3, and following the principles of the United Nations Sustainable Development Goals.

Methodology

As a member of the International Integrated Reporting Council, we closely follow the principles and concepts of its International Integrated Reporting Framework.

This Integrated Report has been produced in accordance with the Global Reporting Initiative (GRI) Standards Comprehensive option and is in line with our Universal Registration Document. The overall process and reports have been assured by an external auditor. The names of the indicators (GRI labels) are placed at the bottom of specific pages with the following codification: [GRI XXX-XX]. In addition, our non-financial performance indicators are also aligned to the Sustainability Accounting Standards Board (SASB), standards for the Software & IT Services industry.

Our raison d'être

The first listed French company to embed its purpose into its corporate statutes, Atos has ensured since 2019 that all its decisions and actions are fully aligned with its mission and core values:

The purpose of Atos is to help design the future of the information space. Its expertise and services support the development of knowledge, education and research in a multicultural approach and contribute to the development of scientific and technological excellence. Across the world, the Group enables its customers and employees, and members of societies at large to live, work and develop sustainably, in a safe and secure information space.

The leader in secure and decarbonized digital

We are the global leader in secure and decarbonized digital, supported by the talent and diversity of 105,000 employees in 71 countries who generate our annual revenue of €11.2 billion.

We offer our clients a range of market-leading digital solutions and products alongside consultancy services, flawless digital security and decarbonization offerings in an end-to-end partnership approach.

In 2020, we transformed Atos into an industry-focused organization. We redesigned our go-to-market and expanded our portfolio for six global industries. We further developed our people's skills to ensure we are fully aligned to our clients, delivering more than 85,000 certifications in digital skills. To help our clients meet their business challenges, we launched our c. €2 billion Atos OneCloud initiative, completed ten acquisitions in digital, cloud, security and decarbonization and enhanced our position in frontier technologies such as quantum computing.

105,000 employees working in 71 countries representing 139 nationalities

Atos is the Worldwide Information Technology Partner for the Olympic and Paralympic Games and we are on track to deliver Tokyo 2020, which was delayed due to COVID-19, in 2021. Our partnership with the Games was extended in 2020 through to 2024, giving us the opportunity, as the lead integrator for technology, to further support the digital transformation of the Olympic Games. We are already actively engaged in work to secure the technology infrastructure for the Olympic Winter Games Beijing 2022 and Olympic Games Paris 2024.

Our purpose is to help design the future of the information space. Atos scientists, experts and R&D programs regularly contribute to the development of scientific and technological excellence. In 2020 we released the acclaimed report Journey 2024, our compelling vision of the technology trends that will change business in the next few years.

We operate under the brands Atos and Atos|Syntel. Atos is an SE (Societas Europaea), listed on the CAC40 Paris stock index.

Successfully transforming Atos for the future

Your Board of Directors is responsible for determining and approving the Company's strategic direction and overseeing its implementation. In what has been an extraordinary year, Atos has shown its capacity to carry out its ambitious strategy for change and deliver record results. 2020 has undoubtedly been a year of significant achievements. The resilience and relevance of Atos's business model have been much in evidence throughout the year, especially during a period of continued volatility when our customers across the world faced multiple waves of the COVID-19 crisis.

Equally importantly in 2020, Atos has built the foundations for the growth agenda that we announced last year and presented at the OGM of shareholders on October 27th. We have significantly strengthened the business, organically and with acquisitions, particularly in digital, cloud, security and decarbonization. The Spring initiative has transformed the organization to be fully aligned with the industries it serves. Through the deep knowledge of our client's industries and their businesses, our value to clients has been enhanced. Spring has also enabled the Company to strengthen its focus on innovation, quality and competitiveness.

Sincere thanks

I would like to express my sincere gratitude to all our people for their enormous efforts in a year which has entailed many significant personal challenges. Throughout this time, the safety of our employees has been our first priority and we have made every effort to understand the reality of what our employees were experiencing across the 71 countries in which we operate. We are delighted that these efforts have been recognized in the outstanding achievements of our Great Place to Work scores.

Despite these challenges, Atos's employees have delivered real value for our clients and all stakeholders. Given everything that has been achieved this year, the Board of Directors joins me in thanking all our people for successfully implementing our ambitious plans with energy and enthusiasm.

Main perspectives for 2021

We are confident that Atos's strategy to reinforce its capabilities in digital, cloud, security and decarbonization is the right one and we intend to continue to drive it forward.

A major part of our success is due to our deeply held belief in the Atos Purpose. This extends beyond the business to encompass the whole of society, enabling it to live, work and grow sustainably in a safe and secure information space.

Never has this been more important. After almost a year of enduring the COVID-19 pandemic, Atos has learned a great deal about helping clients navigate the crisis. On the one hand, we have seen major disruptions in working practices, business models, travel regulations and security. On the other hand, we have initiated some impressive and innovative approaches to adapting to all of these challenges. What we have learnt will serve us in good stead in 2021 and beyond.

It is my strong conviction that Atos is very well positioned to accompany our clients and their businesses as well as society at large and to help them embrace the new technology related imperatives of the post COVID-19 era and face the exciting times that lie ahead with confidence.

Interview with Elie Girard

Chief Executive Officer, Atos

“We are leading the conversation about how to move forward in the post-COVID-19 era and prepare for the rebound we are all hoping for.”

Elie Girard

This has been a complex year for companies around the world. How did Atos fare in this context?

This year, the safety of our employees and their families has been my greatest concern. Using our expertise and knowledge, we were able to fully adopt home working across the Group, moving from 20% to 96% of our employees worldwide working from home in a matter of days.

This resilience enabled us to fully support our clients throughout the year. Our business continuity plans and security capabilities ensured service availability for all clients, including seamless continuation of mission-critical activities across healthcare, the public sector and critical infrastructure.

We also joined the fight against COVID-19, leveraging our technologies to support vaccine research at numerous centers and labs around the world.

Now, we are leading the conversation about how to move forward in the post-COVID-19 era and prepare for the rebound we are all hoping for. Together with clients and our Scientific Community, we are exploring new ways to enable businesses and governments to become more resilient and sustainable in the long term.

I am incredibly grateful to all Atos colleagues for their truly exceptional work, dedication and agility over this year.

What important milestones did Atos achieve in 2020?

First and foremost, more clients put their trust in us. We have delivered a record year for commercial sales. The Spring transformation is driving our ambition to be the leader in secure, decarbonized digital — creating a phenomenal response from clients and accelerating our commercial momentum throughout the year.

It is not only a matter of book to bill, which has been strong throughout the year, leading to 119%. We are also very pleased that the digital component of our sales has increased: 46% of our 2020 revenue was achieved in the digital, cloud, security and decarbonization areas, up from 40% in 2019 and towards 65% mid-term.

In 2020, we signed 10 acquisitions to propel Atos towards its ambition.

We also strengthened our partnerships and enlarged our ecosystem, not only with major players but also with startups that drive innovation – through Atos Scaler, our new accelerator.

We also launched Atos OneCloud with a c. €2 billion investment. Atos OneCloud is the only solution on the market that blends customized industry consulting with application transformation expertise in an end-to-end set of services.

Our portfolio of decarbonization solutions is already delivering results for our clients and driving growth. Atos itself has been carbon-neutral since 2018 and we are on track to achieve net-zero by 2028.

What are your thoughts and priorities for 2021?

In 2021, we will deliver an important milestone of our growth agenda and mid-term plan. First and foremost, there is a clear drive within Atos to achieve our transformation towards much stronger growth. The current high levels of commercial activity will definitely support our return to growth in 2021.

In that context, our priority is to maintain the commercial momentum and high performance levels we saw in 2020, while focusing on additional structural actions in both cost (to improve profitability) and cash (to increase the conversion to free cash flow).

Another priority is improving our business mix towards digital, cloud, security and decarbonization— areas which are also supported by our acquisition strategy.

Finally, we have made significant steps in the ESG domain. An ethos of social responsibility is part of the Atos DNA that all our employees share, which we leverage for the benefit of our clients and our shareholders.

A year of accelerating digital transformation

Over the last decades, the digital revolution has transformed our lives as consumers. Now it is transforming all parts of the world of business.

Significant breakthroughs in technologies such as the Internet of Things (IoT), artificial intelligence (AI) and blockchain are accelerating transformation in all industries, offering both tremendous opportunities and challenges.

By 2022, analysts estimate that 60%+ of the global Gross Domestic Product (GDP) will be digitized, transforming offerings, operations, and business partnership relationships throughout the whole economy.

This also increases exposure to cyber threats and data protection concerns both of which require increased focus in the years ahead.

During the COVID-19 pandemic, key areas of digital transformation, such as the consumption of cloud services or the deployment of digital workplaces, accelerated and this trend is set to continue.

We believe that there are four technology imperatives for business to embrace in the post-COVID-19 era. They address the challenges of sustainability, trust and collective value and show how society can use technology to build back better after the crisis.

- Technology mastery
- Frictionless working
- Building data equity
- Sustainable by purpose

This approach is explored in depth in our report, preparing for the rebound after the COVID-19 crisis, which can be found on atos.net.

The race to new industry expertise and solutions

In 2020, Atos launched its customer-centric transformation program: Spring. As part of this landmark initiative, we established six Global Industry lines at Atos which are helping us build even closer links with our clients and achieve client satisfaction. This vertical approach has enhanced our capability to address business and technology transformation across all these key global industries: **Manufacturing; Financial Services & Insurance; Public Sector & Defense; Telecom, Media & Technology; Resources & Services; and Healthcare & Life Sciences.**

Our Scientific and Expert communities have also shifted into industry domains. With this pivot, we are making sure that the technologies, products, and patents we design and develop have specific industry requirements at their heart.

Spring has had an immediate impact on Atos and on the experience of our clients. In the first year of the new organization, we increased our Net Promoter Score by six points to **65%**.

Leaders in our sector

In 2020, major industry analyst firms assessed Atos capabilities and positioned Atos as follows:

Creating new data-driven services and business models

At Atos, we believe that digitalization has only delivered a fraction of its potential. While the data deluge of the last decade will accelerate, it will now be topped by a profusion of data-driven services.

Our relentless focus on value, innovation and security

In this new era, our clients are calling above all for value, safety and the highest levels of customer and employee experience. They require outcome-based services that are innovative, flexible, secure and decarbonized.

The needs of our clients around digital, cloud, security, and decarbonization are accelerating. At Atos, we have the experience and the expertise to meet all their requirements.

We are global experts in seven key digital breakthroughs:

1. Full stack cloud

With its full stack, end-to-end capabilities, Atos is uniquely positioned for the cloud revolution. In 2020, Atos launched its Atos OneCloud offering, a unique initiative to accelerate its clients' migration to the cloud, supported by a dedicated c. €2 billion investment over the next five years. The strength of Atos OneCloud is based on Atos's ability to orchestrate any combination of individual offerings and to tailor them by industry.

84% of enterprises have a multi-cloud strategy

50% of workloads run on hybrid cloud today

70% of economic value will be created by digital platforms

25% CAGR 2019-2025 for business critical applications

40% remote working will be the new normal

#1 in cybersecurity in Europe

77% of customers have already set emission reduction targets

2. Business critical applications

Digital transformation has put business critical applications at the heart of business continuity for all major industries. Whether reducing R&D cycles or optimizing production processes, Atos is using IoT and data analytics to drive business critical outcomes. Our industry knowledge, our end-to-end technology, our know-how in managed services and our leadership in edge computing make us the partner of choice in this fast-growing market.

Vision and Strategy

3. Digital platforms

Digital platforms will be responsible for an estimated 70% of the new value created in the economy. Digital platforms, which enable the sharing of data from enterprises within or across value chains, represent a huge untapped opportunity in the B2B world. Through its end-to-end digital capabilities combined with a deep industry knowledge, Atos, as a recognized leader in security and computing, is ideally positioned to be the neutral enterprise operator of digital platforms.

4. Customer experience

In this new era of digitalization, customer experience will be critical to expand the reach of newly created data-driven services. This will leave the sole domain of user interface to encompass further immersive experience, real-time innovation and seamless omni-channel, as well as "No User Interface" logic. Atos leverages IP-driven solutions to bring technologies such as artificial intelligence / machine learning (AI/ML), IoT / edge (local computing), and real-time cloud and application architectures in the area of customer experience that unleash the power of digitalization. We have the industry expertise, innovation skills and strong commitment to customer satisfaction to bring new experiences to life.

5. Employee experience

Before COVID-19, only 10% of employees worked from home in most organizations. Almost overnight, that went to 90%+. Atos anticipates that more than 40% of work-from-home will be the new normal. In this context, employee experience is a strategic priority. Building on our industry knowledge and expertise in Unified Communications, digital workplace and cybersecurity, Atos is

helping its clients reimagine new ways of working and reinvent the employee experience.

6. Digital security

Digital security encompasses not only cybersecurity but also mission-critical systems, IoT security, and economic security. Cybersecurity is evolving at an extremely rapid pace due to an ever-changing cyber threat landscape, a pervasive data environment, and an increased attack surface. Atos is number three in cybersecurity services worldwide. In 2020, we acquired Paladion, adding a cutting-edge AI-powered platform to our portfolio and positioning us to generate more than €2bn annual revenue in digital security in the mid-term.

7. Decarbonization

In 2020, Atos made a public commitment to be Net-Zero Carbon by 2028. We also acquired EcoAct, enhancing our unique decarbonization offering which helps customers accelerate their transition to net-zero using innovative Decarbonization Level Agreements. As decarbonization enters the boardrooms of our clients and is driven by unprecedented public policies and societal aspirations, we expect to generate more than €500m revenue mid-term by supporting our clients on their journey to decarbonization.

Vision and Strategy

Five drivers to become the global leader in secure and decarbonized digital

1 Spring: an industry-led organization with a vertical portfolio and go-to-market approach, focusing on six key industry sectors.

2 Mobilize and develop people skills, attracting the best talents from leading universities and developing their skills.

3 Technology and open innovation, with investment in R&D at c.€235m per year.

4 Alliances and partnerships: global alliances: e.g. Dell EMC, Siemens, cloud hyperscalers: Amazon Web Services, Google Cloud, Microsoft Azure.

5 Mergers and acquisitions: bolt-on acquisitions to boost key offerings, particularly in decarbonization, cloud and digital security.

To find out more visit the 2020 Universal Registration Document section 1 Group Overview

Raison d'être

We believe that our raison d'être will be a vital ingredient for success in the years to come. It will maximize potential and sustainability by keeping our long-term path and values clearly defined.

Atos approaches the application of its raison d'être according to three pillars: building a trusted digital space, taking part in tackling climate change and contributing to scientific and technological excellence.

In 2020 Atos established an internal working group of 50 employees with relevant expertise from across our operational and support functions to ensure the key objectives in our raison d'être were properly implemented and promoted in all our activities.

Key mid-term objectives

Atos has aligned its strategy and operations to reach the following mid-term financial targets:

- A revenue growth at constant exchange rates between +5% and +7%
- An operating margin rate between 11% and 12% of revenue
- A free cash flow conversion above 60% of operating margin

Our ambition is to:

- Deliver a sound, profitable top line growth
- Rebalance the Atos group business mix so that digital, cloud, security and decarbonization represent 65% of the Group revenue, compared to 40% in 2019
- Enhance technological innovation at the heart of our group and accelerate the upskilling of our people
- Demonstrate our commitment to decarbonization: Reach net zero emissions by 2028 and reduce by 50% the global carbon emissions under our control and influence (scopes 1, 2, 3) by 2025
- Continue our focus on diversity, reaching gender balanced recruitment.

Vision and Strategy

Innovation that drives growth

Interview with Sophie Proust,
Chief Technology Officer, Atos

“Open, agile innovation is something we are passionate about. It is the key to the future of Atos and the future of our clients.”

Sophie Proust

What role does technology play in Atos's growth strategy?

Technology is a major driver of client satisfaction and our business growth as we work side by side with our clients to solve their business challenges using new technologies.

We are focused on developing market-facing solutions: designing, developing, and producing our own products, both in-house and with our ecosystem of partners and startup organizations. Our innovation and leadership in emerging technologies such as quantum computing keep us at the forefront of new trends and opportunities with a portfolio of 3,000 patents – and it is growing all the time. We never stand still.

Our Tech Trends radar maps where we see new technologies emerging that will change our clients' business. This means that we can bring the latest innovations to our go-to-market plans and keep our clients at least one step ahead with emerging technologies. As thought leaders and pioneers in our industry, we want to make sure our clients are in pole position for the future.

424 customer innovation workshops in 2020

3,000+ patents

€235m annual Research & Development spend

How do you encourage innovation across Atos?

Our culture is one that inspires creativity, ideation, agility and disruption. It is this spirit that makes Atos such a unique place to work.

Every year we showcase our innovative talent and share knowledge through events such as Innovation Week and Tech Days. This year we launched a new internal innovation program called ImpactYourFuture which aims to find solutions to specific business challenges our clients may face. Every challenge has a sponsor, who commits to taking great ideas forward into concrete solutions that will drive client benefits.

Working with promising and disruptive startups through the Atos Scaler accelerator program enhances our portfolio and go-to-market. Open, agile innovation is something we are passionate about. It is the key to the future of Atos and the future of our clients.

How closely do you work with clients on innovation?

I would say very closely. In 2020 we hosted over 400 Client Innovation Workshops working together on new solutions to their challenges. The reality is that our clients' challenges are key drivers for innovation at all levels of Atos. For example, members of our Expert Community of distinguished technologists regularly meet with clients to share their perspectives with them. That is incredibly valuable to our clients. Of course, Atos also benefits from this approach as it provides us with additional industry insights to inform the work of our innovators. It's part of what makes Atos such an important partner for our clients.

Two communities on the cutting-edge

Scientific Community

The Atos Scientific Community brings together around 160 leading scientific experts from across the company. For more than 10 years, the Scientific Community has been working to anticipate the technological upheavals and the commercial challenges that Atos customers will face in the future. This community shares its thoughts through regular publications accessible to all, including Journey, our future-focused series. In 2020, Atos published its Journey 2024 report, Redefining Enterprise Purpose, sharing an inspirational vision of the changing world of business, society and technology in the post-COVID-19 era.

Expert Community

The Atos Expert Community is the driving force of innovation and technology expertise at Atos. Launched in 2017, it is now composed of more than 2,400 experts in 51 countries. By creating synergies, leveraging experience and knowledge-sharing across different technology domains, industries and regional business units, the Expert Community is an integral part of the innovation process offered to Atos clients.

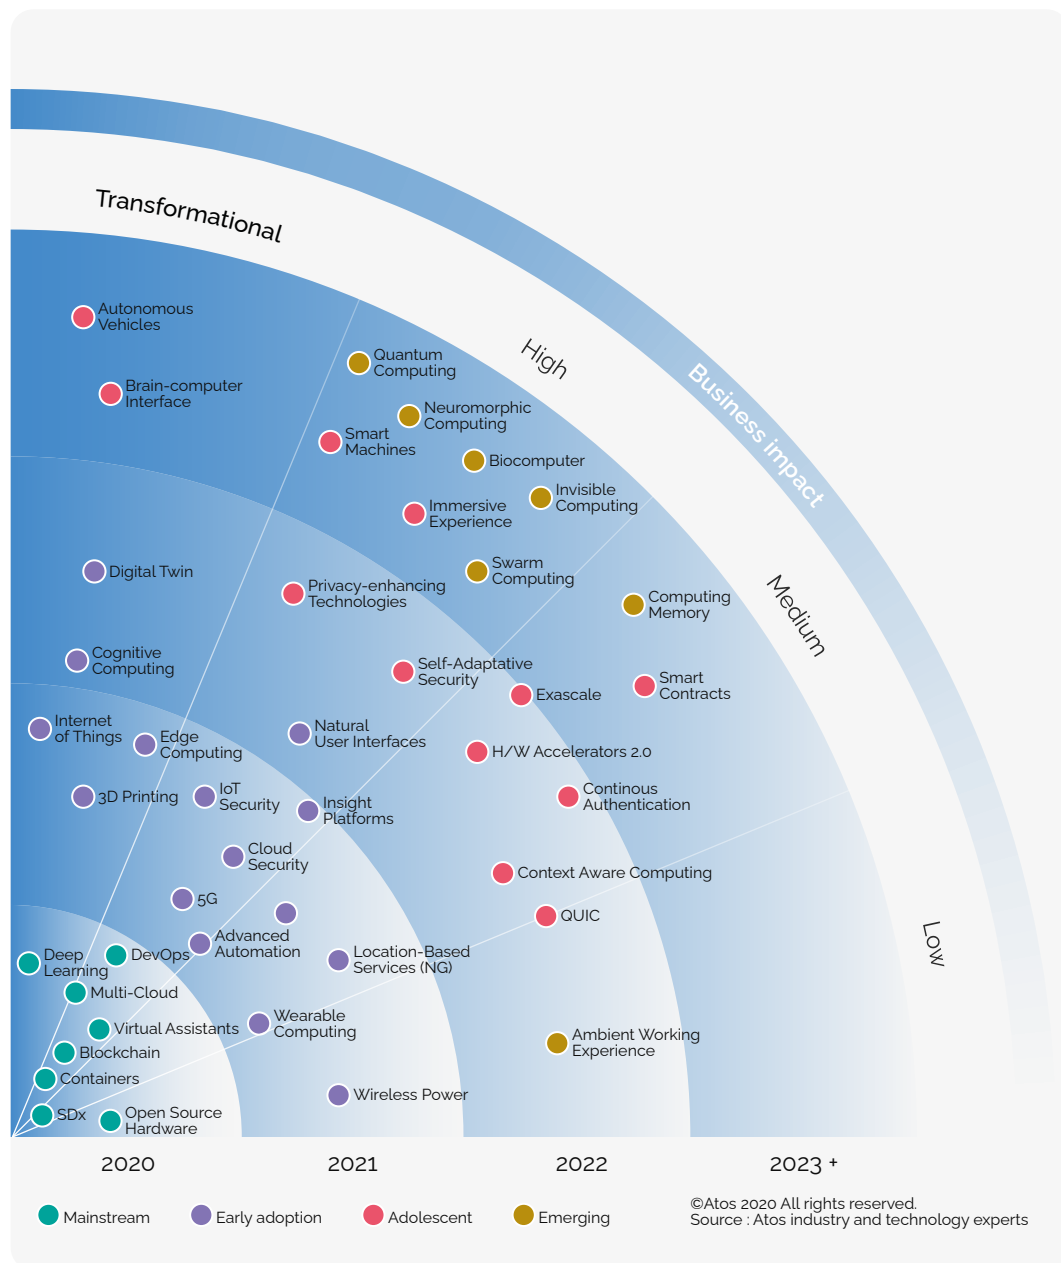

Tech Trends Radar 2020

The Look Out Tech Trends Radar published annually by Atos is designed to help our clients understand the technological landscape that lies ahead. It sets out the key technologies that will impact business

in the coming years.

Our role is to understand the technologies that will drive success in the future – and to help our clients harness the optimal power of these technologies.

Performance

Key achievements in 2020

Atos has emerged from the exceptional and challenging year of 2020 in a strong position. With record-high bookings, a reshaped portfolio of state-of-the-art offerings, a strengthened go-to-market and a balance sheet free of net debt, we are leading the way towards a digital future that is secure, sustainable and decarbonized.

The Atos ambition

In 2020, 46% of our revenue came from cloud, digital, security and decarbonization, up from 40% in 2019. In the mid-term, we will increase the contribution of these transformative technologies to 65%. To accelerate our journey, we completed 10 acquisitions in 2020 that strengthen our position in all these high-growth areas. Our state-of-the-art technologies in these fields already represent more than 70% of our sales pipeline.

A massive Spring forward

Launched in early 2020, the Spring program is propelling Atos towards new levels of growth. Spring has taken our industry expertise, our passion for innovation and our obsession with customer value and converted these assets into rocket fuel for digital transformation. The response from our clients has been phenomenal. With an expanded and verticalized portfolio of offerings for six key industries and a redesigned go-to-market, Spring has transformed Atos into a global powerhouse for digital services.

A smoother journey to cloud

Atos OneCloud is accelerating the migration of our clients to the cloud at a time when this has never been more critical. Backed by c. €2 billion of investment, and leveraging

the full power of the Atos ecosystem, Atos OneCloud is driving digital transformation and delivering impactful outcomes in secure, decarbonized cloud environments, whether public, private or hybrid. Atos OneCloud is specifically designed to help our clients speed up innovation and achieve business results fast.

Pioneers in decarbonization

We are experiencing extraordinary demand from customers in all industries for our decarbonization expertise. To accelerate the growth of decarbonized digital services, we have acquired climate strategy consultancy EcoAct and developed "A to Zero", a powerful framework for helping our clients transition to net-zero. We are pioneers of decarbonization as a service and leaders in the technology revolution that is critical to the future of the economy and the planet.

Faster, smarter, greener

Our supercomputers are on the cutting-edge of research into global challenges such as combatting COVID-19 and modelling climate change. They are some of the fastest supercomputers in the world – and the most energy efficient. At the Jülich Supercomputing Centre in Germany, we have deployed the most powerful supercomputer in Europe and the most energy-efficient supercomputer in its class worldwide. Based on our BullSequana platform, the supercomputer

Performance

uses Atos's patented DLC (Direct Liquid Cooling) solution to minimize energy consumption while it tackles some of the biggest problems of our time.

Securing all areas

Atos is the world number three in cybersecurity and the European leader. At a time when cyber criminality is increasing at an alarming rate, we have reinforced our portfolio and added new services and state-of-the-art technologies with the acquisitions of Paladion, SEC Consult, Motiv and digital.security. Using the power of AI and data analytics to detect and respond to threats, we are protecting our clients from the increased scale and sophistication of cyberattacks today.

Leaders of the workplace revolution

The pandemic has driven strong demand for our Digital Workplace offering. At Atos, we believe that this year's revolution in working patterns is here to stay. Forty percent remote working will be the new normal and employee experience will be a strategic priority, at home and on the road. For many of our clients, this vision is already a reality. Thanks to our industry expertise and our leadership in communications, security, AI and cloud, we are reinventing the future of work – today.

All-in on quantum

Atos is a world leader in the industrial application of quantum. More than 20 forward-looking clients are already using our state-of-the-art Quantum Learning Machine (QLM) in fields such as carbon capture and disease analysis. This year, we took decisive action to drive quantum to the next level. We partnered with French startup Pasqal to develop a quantum accelerator by 2023. We also launched the world's first universal metrics for assessing quantum performance: Q-Score. Q-Score measures a quantum system's effectiveness at handling real-life problems – problems which cannot be solved by classical computing. Watch this space to see the future unfold.

A beacon of diversity

In 2020 we went from having 13% of women executives in the Top 450 to 30%. This year, 40% of Board members and 37% of our new joiners are women, above the industry average. We are using AI to remove gender bias in job offers and hire more women than ever before. With 26 nationalities represented in our executive management, we are one of the most diverse, inspiring and rewarding workplaces in the industry.

A great place to work, a great place to grow

In a challenging year for all organizations, the Atos workplace recorded an extraordinary achievement. We increased our score on the Great Place to Work Trust Index to 65%, from 58% in 2019. This performance puts us in the top quartile of the digital industry. During the crisis, 98% of our colleagues felt safe and 90% felt supported. We are passionate about enhancing our employee experience. In a pandemic year, we delivered more than 85,000 certifications in digital skills, up 40% on the year. We are well on the way to our mid-term target of 500,000. At Atos, the workforce of the future is ready for action.

Accelerating to net-zero

At Atos, we don't just talk the carbon talk. We actively make a difference. In 2020, we reduced the carbon emissions we control by 15%, largely due to our global decarbonization program. This is just the beginning. We have made a massive commitment to further cut the emissions under our control and our influence and offset all residual emissions from our wider business footprint and to reach net-zero carbon by 2028. That is 22 years ahead of the 2050 target aligned with the COP 21 Paris Agreement and seven years earlier than our previous target.

Financial performance: Record high bookings

The strong dynamism of Atos in 2020 led, despite the impacts of the COVID-19 crisis, to record high bookings of €13.3 billion, representing a book to bill ratio of 119% compared to 106% in 2019 at constant exchange rates. During the fourth quarter, the book to bill ratio reached 130%.

Thanks to our resilient business model, revenue held up well at €11,181 million, representing a reduction of 3.0% organically and 2.3% at constant currency. The Group benefited from strong demand in cloud migrations, digital workplace solutions to enable people to work from home, and big data & cybersecurity services. Conversely, the revenue was impacted by application project postponement as well as less fertilization on existing contracts.

Operating margin was €1,002 million, representing 9.0% of revenue, compared to 10.1% in 2019 at constant scope and exchange rates.

Revenue recovered from Q2, and we have implemented a structural cost program, with cash generation remaining strong.

Breakdown by Regional Business Unit

Performance

Creating value through digital with purpose

Atos is committed to playing a leading role in Corporate Social Responsibility (CSR), and to continuous improvement in this area. By integrating environmental, social, ethical and security dimensions into its business strategy and the design of digital solutions, Atos is ideally positioned to shape a more sustainable future in a safe and secure information space, in line with its *raison d'être*.

Each year we publish an integrated performance dashboard as part of our Integrated Report. Its eight indicators are regularly reviewed at the Group's strategic meetings.

**40% (4 out of 10) pursuant to the legal ratio. In accordance, the Director representing the employee shareholders and the Employee Directors are not taken into account to determine the ratio of gender diversity on the Board of Directors (art. L. 22(-23 and L. 225-27-1 of the French Commercial Code).

Group Management Committee

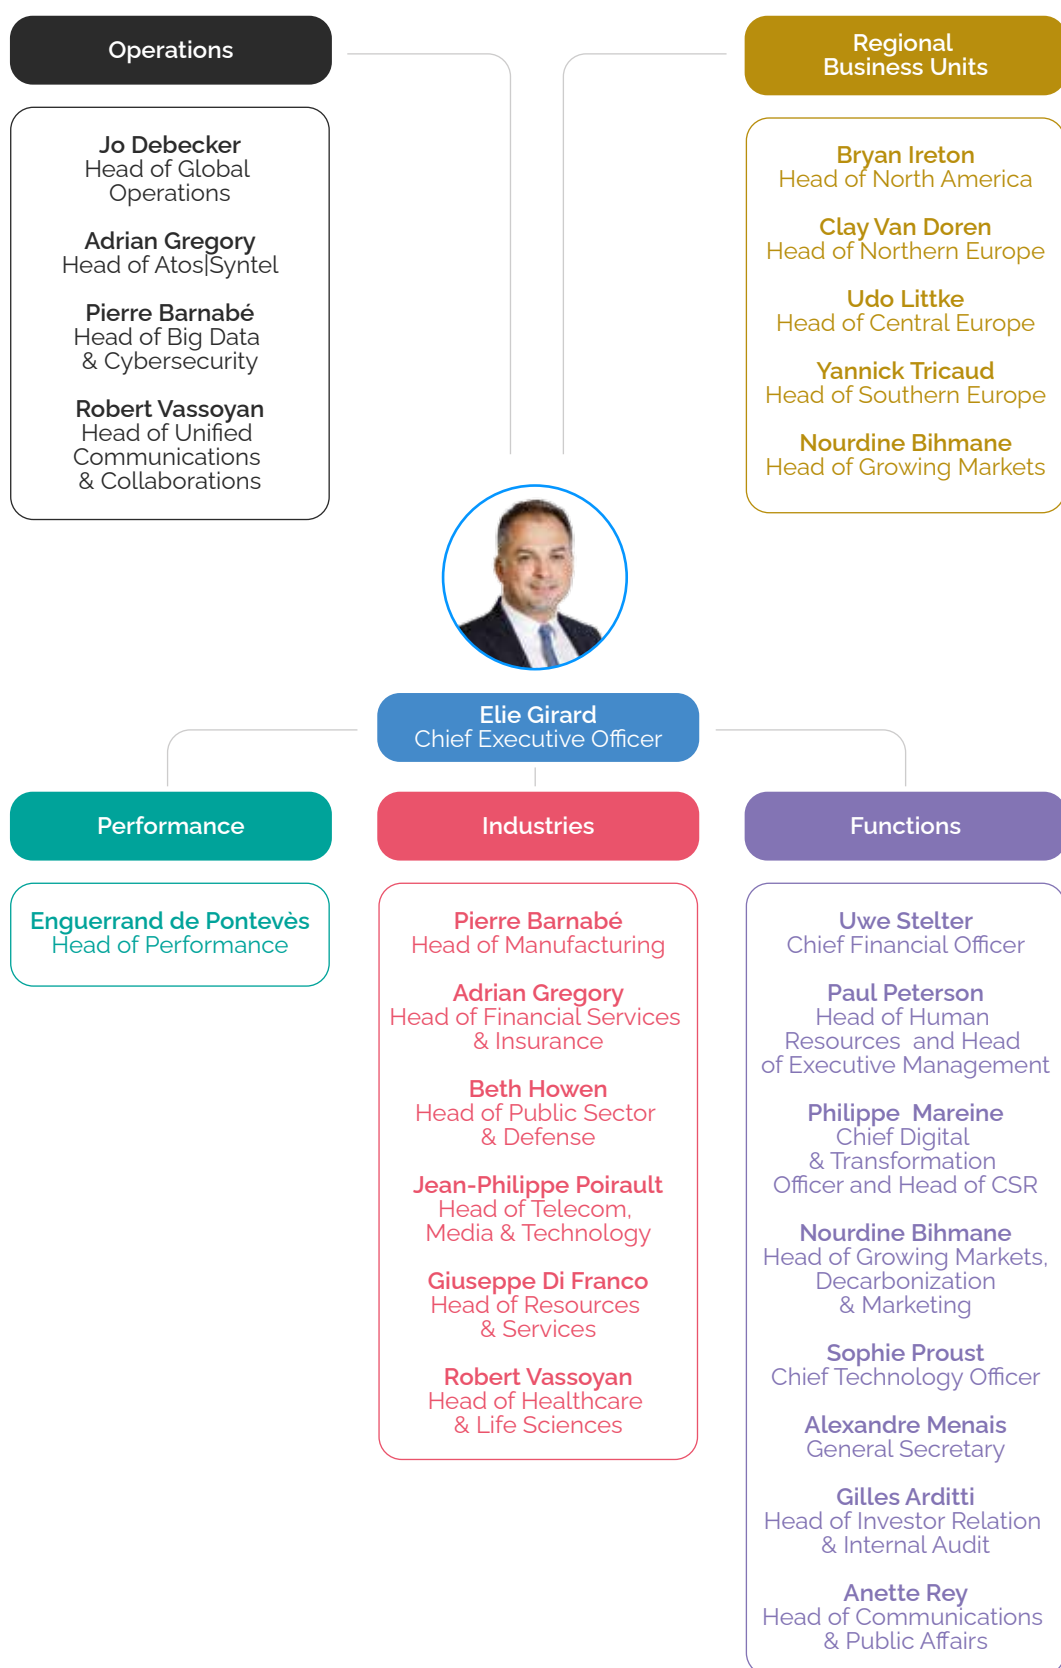

The Atos Group General Management Committee (GMC) consists of the Chief Executive Officer, Elie Girard, and the Heads of Industries, Geographies, Operations, Performance and Functions.

The role of the GMC is to develop and execute the Group strategy and to ensure value is delivered to clients, shareholders, partners and employees. The GMC oversees the global coordination of the Group management.

Corporate Governance

Our approach to risk management

As a major global provider of digital transformation solutions, Atos is inevitably exposed to risk from the rapidly evolving environment in which it operates and from changes to regulations across the globe.

To mitigate risk and, beyond that, to succeed and develop securely and sustainably, Atos has implemented a multi-factor risk management system. The governance is described hereafter:

The first line of protection is ensured by all Atos employees in their daily work under managerial supervision.

The second line of protection provides oversight and control. It establishes enterprise-wide risk governance and business resilience requirements based on risk analysis.

The third line of protection is assured by the internal audit team which carries out audits, investigations and advisory

engagements to provide independent assurance of the effectiveness of the first and second lines of protection.

The CEO and Group Management Committee are regularly updated on internal control, internal audit and risks. The Board of Directors' Audit Committee considers reports on internal audit activities, contracts with significant risks and periodic updates on internal control and risk management.

* Corporate Social Responsibility (CSR) also reports to CSR Committee (BoD)

Risks related to the qualification for limitation of scope issued by the statutory auditors relating to two US subsidiaries

Enterprise risk

As part of their audit of the 2020 consolidated financial statements, the Group statutory auditors have identified in two US subsidiaries (Atos IT Solutions and Services Inc. and Atos IT Outsourcing Services LLC, which represent 11% of 2020 consolidated revenues), several matters relating to internal control weaknesses over financial reporting process and revenue recognition in accordance with IFRS 15 leading to several accounting errors, as well as risk of override of controls in this respect. Despite additional audit procedures, the statutory auditors were not able to perform within the timeframe the necessary work to obtain sufficient appropriate audit evidence in respect of revenue recognition or other related account balances of these two US entities and on the absence of material misstatements for the consolidated financial statements.

In this context, the statutory auditors have issued a qualified opinion due to a limitation on the scope of the audit, which is included in their report on the consolidated financial statements for the year ended December 31, 2020 available in section 6.1.1 of this document.

As of today, the Company has not identified misstatements on the two US entities that are material for the consolidated financial statements. However, additional work is ongoing to obtain sufficient appropriate audit evidence in respect of revenue recognition or other related account balances of these two US entities. It cannot be excluded that, as part of this additional work, misstatements are identified that could be material for the consolidated financial statements.

In addition, this situation and its consequences could reveal human deficiencies in the application of the Group's accounting standards and financial procedures and give rise to proceedings or investigations, in France or abroad.

Mitigation actions

The Group's financial processes are subject to a rigorous internal control system relating to accounting and financial information, as described in section 7.4.4 of the Universal Registration Document.

As soon as the Group became aware of potential internal control weaknesses, it hired external firms to perform additional work to obtain the necessary evidence that the financial reporting of the two relevant US entities is free of material misstatements and an independent forensic investigation.

To address the weaknesses identified, the Group Finance Department has also defined a comprehensive action plan notably including the strengthening of preventive controls and processes, an update of the Group Accounting Manual, a reinforcement of the dedicated teams, an upgrade of the training programs, in particular in the context of the rollout of the new version of the Group Code of Ethics, as well as the setting up of dedicated training modules.

The implementation of this comprehensive action plan by the Group management will regularly and closely be monitored by the Audit Committee and its Chairman. The action plan could be enriched during its implementation phase, notably thanks to the continuous exchanges with the Group statutory auditors and to the additional ongoing work.

For more information please refer to the Universal Registration Document on atos.net

Creating value through Corporate Social Responsibility

Setting higher Corporate Social Responsibility standards in our industry

Corporate Social Responsibility (CSR) plays a critical role at Atos. It is a vital aspect of our business strategy and a fundamental driver of our success. Our vision is to be the global leader in secure and decarbonized digital. Achieving this depends on our continuing excellence in CSR.

Our targets in the areas of environment, social and governance are ambitious. This is not only about compliance but creating value and positive outcomes for all our stakeholders.

We have set the highest carbon reduction standard for our industry not only for our own operations but also for the emissions of our products and supply chain. We have committed to net-zero carbon emissions as soon as 2028, 22 years ahead of the 2050 target aligned with the COP 21 Paris Agreement.

Today, we are recognized by the major ESG ratings as the leader in our industry. In 2020, we reached the top position in the Dow Jones Sustainability Index (DJSI) for the IT services industry globally.

And we aim for more. In 2020, the COVID-19 pandemic accelerated the pace of change within Atos and made CSR, and our sense of purpose as an organization, even more critical to the future development of the company. Our primary focus has been the health and inclusion of our employees who helped us support the needs of our clients for business continuity.

Interview with Philippe Mareine,
Chief Digital and Transformation
Officer and Head of CSR

Philippe Mareine

Key areas for action

At a time when we are increasingly aware of the fragility of our planet, Atos made a firm commitment to bring forward our plans for net-zero carbon emissions to 2028 from 2035. We have also developed a trailblazing decarbonization portfolio for our clients, creating roadmaps for their own journeys to net-zero.

During the pandemic, the risks of a digital divide increased. In a world in which digital is critical to personal wellbeing and business success, we increased our focus on all elements of digital inclusion, from digital workplace solutions to accessibility. At Atos, we have chosen to accelerate diversity within our business. In 2020, 30% of our top executives were women, up from 13% in 2019.

As the data economy gathers incredible traction, Atos is increasing its focus on security and on building an ethical approach to the use of data. We believe in data equity. We believe in organizations being able to share data through platforms. We are founding members of the European initiative GAIA-X which aims to develop common standards for data infrastructure.

In the pandemic, trust and confidence in digital and in the management of data became more vital than ever. If there is no trust in data management, the new economy will fail. Tackling cybercrime and ensuring digital security continues to be an area of excellence for Atos. We are also expanding our approach to look at the ethics of data management, particularly in artificial intelligence and machine learning.

The importance of innovation has also been a key lesson of the pandemic. Our clients are striving for new business models and disruptive technologies to maintain their success. As a leader in innovation and a pioneer in CSR, we are uniquely positioned to help our clients achieve all their goals. Our innovation-driven culture applies both to ourselves and to our clients for whom we create the best conditions to innovate and transform.

Creating value through Corporate Social Responsibility

Open dialog with our stakeholders

Atos maintains dialog with a broad range of stakeholders who include clients, employees, employee representatives, business partners and suppliers, the investment community as well as the communities we are part of. Our raison d'être underpins our commitment to generating economic value that also creates value for society at large.

We regularly talk with stakeholders to assess our material risks and challenges so that we can adapt our CSR program on an annual basis. In the case of our clients, this helps ensure we provide a portfolio that supports their sustainability ambitions. In the case of our employees, we have a culture of permanent social dialog which is organized so that our people can raise their opinions through a variety of formal channels and informal networks. In 2020, our internal green network brought Atos people together to support our environmental targets and discuss environmental concerns.

To find out more visit the 2020 Universal Registration Document section 5.1.3 Atos stakeholders' approach and engagement

Interview with Alexandra Knupe, Group Head of Corporate Social Responsibility

“Our regular conversations with our clients help us adapt our CSR program to ensure we provide the information they need and a portfolio of solutions that supports them in their sustainability targets.”

Alexandra Knupe

Creating value through Corporate Social Responsibility

Balancing risks and opportunities in a fast-changing world

Each year we conduct a comprehensive assessment of the enterprise risks that our company faces, which are then continuously followed and monitored.

All risks are categorized into one of the three priority areas identified by our corporate social responsibility program: environment, social and governance. We then carry out a mapping exercise which enables us to select and rank

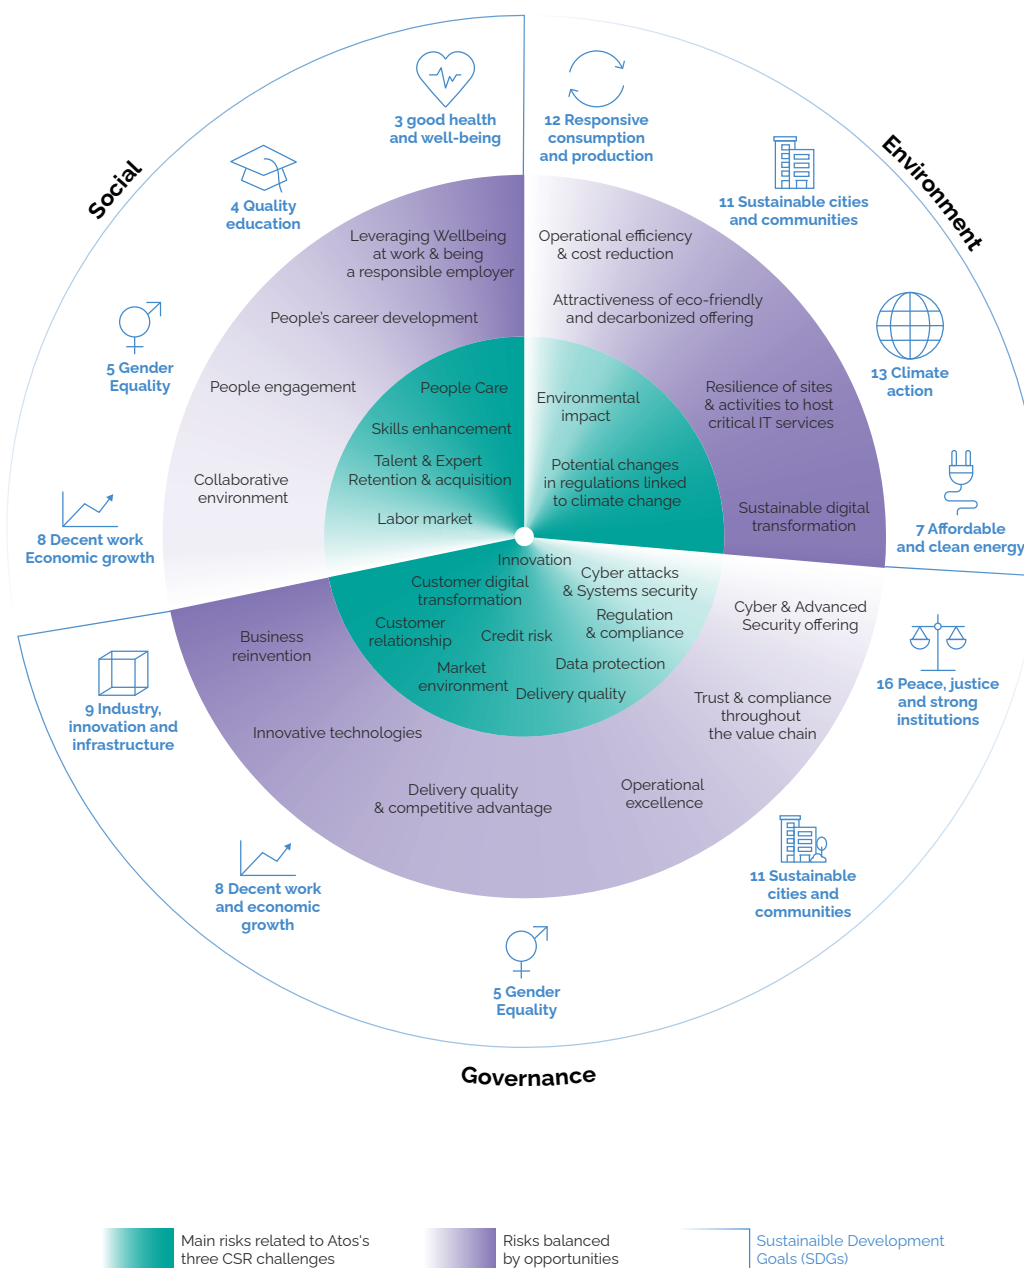

the most material risks. The following chart illustrates the risks identified in 2020. It also maps the link between these risks and opportunities and the UN Sustainable Development Goals we support.

To find out more visit the 2020 Universal Registration Document section 7.2 Risk factors

Creating value through Corporate Social Responsibility

Assessing our material risks, opportunities and challenges

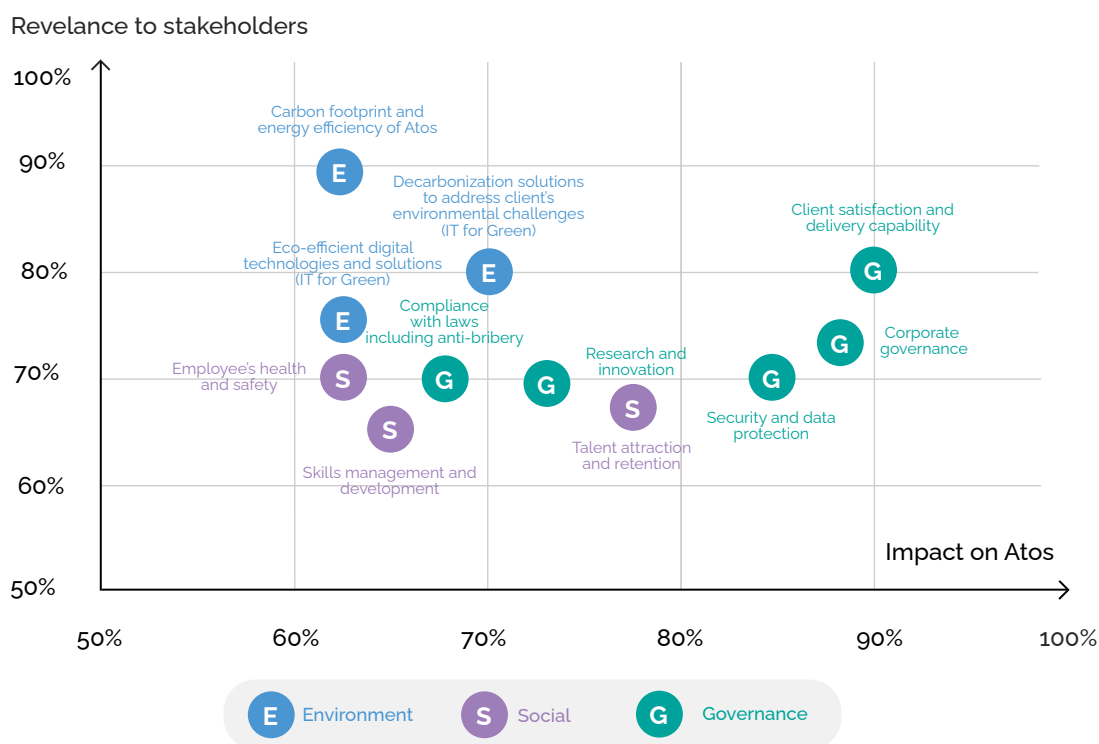

Every year Atos undertakes an analysis of the material Corporate Social Responsibility (CSR) issues that have an impact on our business and the expectations of our stakeholders.

Our annual materiality analysis allows us to identify CSR issues that are critical to achieving our goals, strengthening our business model and enhancing our positive impact on society. This analysis helps us to determine the key performance indicators (KPIs) for monitoring our progress in these areas.

In 2020, the materiality assessment was carried out by an external consultancy, with the support of the Board CSR Committee. For the first time, the evaluation was open to public contribution through the Atos website.

The 2020 materiality assessment covers the standard framework of environment, social and governance dimensions. It also highlights our direct contribution to eight of the 17 United Nations Sustainable Development Goals (SDGs) for the 11 material issues presented below.

Atos materiality matrix

To find out more visit the 2020 Universal Registration Document section 5.1.4 challenges and materiality matrix

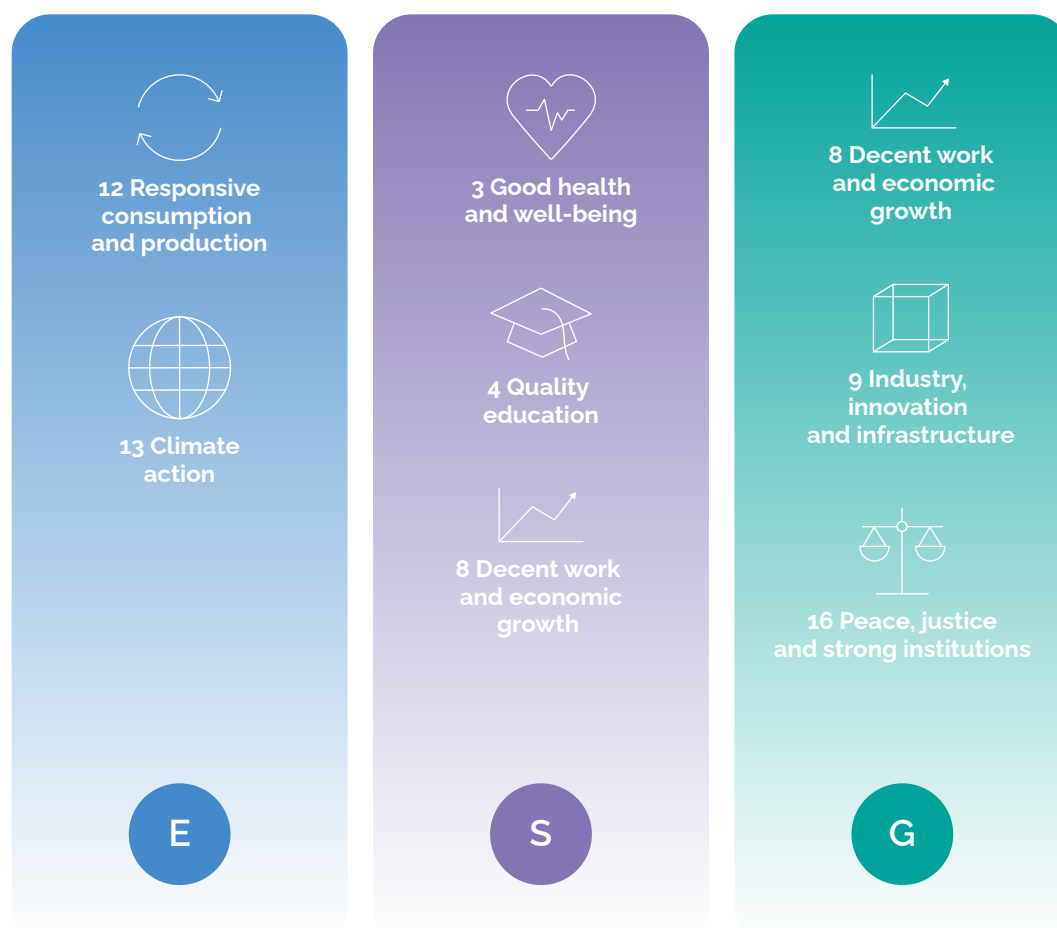

Atos contribution to SDG's for the top 11 material issues

The materiality matrix highlights the top 11 material issues, but the CSR program goes deeper and covers many other challenges. Atos remains committed to critical areas such as digital inclusion and diversity. Atos activities in several growing markets also support the countries in redefining new ways of doing business through digitalization and innovation, with direct impact on local employment, social

and technical development and leveraging competences in their societies.

As a result, the Atos CSR program, encompassed in its statement of purpose, drives the contribution of the 17 SDGs, ensuring that sustainability is an outcome of the Group business strategy*.

*40% (4 out of 10) pursuant to the legal ratio. In accordance with art L225-23 and L225-27-1 of the French Commercial Code, the Director representing the employee shareholders and the Employee Directors are not to be taken into account to determine the ratio of gender diversity on the Board of Directors.

Targets towards a zero-carbon future

We are following the guidelines of the COP 21 Paris Agreement and the Science-Based Targets initiative because we know it is both the right thing to do to combat climate change and that it gives us a competitive advantage in the market. The expectations of clients and shareholders in this area are rapidly changing and we plan to stay ahead of the curve.

We have two primary targets: firstly, to halve our emissions between 2019 and 2025 to contribute to maintaining global warming around 1.5°C, and secondly – aligned with scientists' thoughts on what is needed to achieve the Paris Agreement ambition – to reach net-zero emissions as soon as possible. And we have committed to reaching that by 2028.

We want to reduce our climate-related risks and seize climate-related opportunities. Seizing opportunities means offering our clients new solutions: 'Green IT' solutions which have the smallest possible impact on the climate and 'IT for Green' solutions to help them achieve their sustainability ambitions. Digital has the potential to be part of the solution to climate change. Surveys show that new digital solutions can remove ten times the emissions they produce and the energy they consume.

Leading the way in carbon reduction

Our action plans detail how we plan to reduce the emissions under our control, which is what we call the Atos operational scope. We aim to halve the emissions related to the energy consumed by our supercomputers, data centers, and offices. Our shift towards low carbon and renewable energy sources will be one of our most impactful actions. We are also boosting our green mobility by shifting to hybrid

and electric cars, enforcing better travel discipline, and continuing to enhance our remote collaboration tools.

Meanwhile, we will reduce the energy consumption of the products and solutions we sell to our clients, using best green IT practices, green lifecycle assessments, eco-design, and following eco-guidelines. We have R&D investments dedicated to energy and emissions and we have adopted circular economy principles.

For emissions not under our operational scope but that are under our influence, Atos is working with its suppliers to reduce the emissions embedded into the products, goods and services we buy. We have implemented CO₂ criteria in our calls for tender and have ratings to classify our suppliers. Together these actions will encourage green suppliers which is vital since upstream emissions account for around 70% of our total.

In 2020 we reduced our total carbon emissions (full SBT scopes 1,2,3) by 15% from 2019. Our ambitious shift toward renewable energy for emissions under our control is playing a huge part in our success. And when we look at the potential reduction in the coming years, we know that we are on target to meet or even, we hope, exceed our 2025 target.

Creating value through Corporate Social Responsibility

Interview with Benjamin Bergeron, Head of Atos Global Environmental Program

**“Digital has the potential
to be part of the solution
to climate change.”**

Benjamin Bergeron

Latest developments in our carbon reduction journey

Atos has set high standards for its industry for ambitious net-zero targets and has committed to being net-zero by 2028. Our strategy for carbon reduction covers four primary areas: carbon emissions, energy, travel, and the impact of our digital solutions.

Between 2012 and 2019, we reduced the emissions from our carbon operational perimeter by around -50% both in intensity and absolute terms. In 2020, we moved our 2°C carbon reduction target to the most demanding 1.5°C Science Based Targets and committed to halve our overall carbon emissions by 2025 (2019 baseline) which is five years ahead of the Science Based Targets initiative request.

2015/2020 - CO₂e cumulative reductions in **intensity** and **absolute**

To find out more visit the 2020 Universal Registration Document section 5.2 Environment

Carbon offsetting

In 2020, Atos offset 100% of its carbon operational perimeter (emissions from data centers, offices, homeworking, waste, commuting and business travel). As Atos digital services and hosting services are carbon-compensated worldwide, our clients can report zero (0) CO₂e emissions in relation to their solutions hosted in our data centers. The Atos offsetting program is carried out through wind farm projects which generate clean electricity and through forest protection projects which enable nature-based removal or carbon capture to counterbalance carbon emissions.

Introducing internal carbon pricing

In 2020, Atos became one of the first companies in its industry to establish an internal carbon pricing mechanism. The aim is to attach a value to tCO₂ emission reduction that will impact the operating margin results used in the bonus payout calculation. The three factors considered in the Internal Carbon Pricing calculations are emissions related to travel, devices and data center activities, supporting spend with green suppliers as well as our decarbonization offerings delivered to our clients.

Atos employees' drive for net-zero

The Atos Green App is aiding our employees to monitor our environmental progress towards our targets and to actively contribute to this progress. The app increases decarbonization awareness by allowing users to measure their carbon impact resulting from their use of email, portable devices, web sites, and travel.

Atos Green Network

One of our most active employee-led communities, the Atos Green Network, encourages greener practices. It supports projects such as abandoning plastic for all purchases and promotional products, publishes dedicated newsletters and organizes environmental awareness webinars on topics such as World Ocean Day, Earth Day and Climate Change awareness.

EcoAct joins Atos

The central mission of EcoAct, which Atos acquired in 2020, is to promote, support and contribute to urgent action to tackle climate change and protect our planet. In 2020, EcoAct launched "A to Zero", a transformational guide for companies to establish their pathway to a net-zero future by addressing their response to reducing GHG emissions and the impact they have on the environment.

Creating value through Corporate Social Responsibility

Atos Scaler supports Atos decarbonization portfolio

More than 50% of the members of Atos Scaler 2020, a new program launched in 2020 to bring the best cutting-edge innovative startups into the Atos ecosystem, are already enriching Atos's decarbonization portfolio.

One of the program's criteria is to contribute to a decarbonized digital world. With DreamQuark we have jointly developed a solution to help wealth managers identify investors most likely to select sustainable investments and to create hyper personalized recommendations to increase ESG-driven revenues.

The B2B software solution from Plan A helps businesses calculate, monitor, reduce and offset their carbon footprint while creating proprietary sustainability action plans. GreenSpector, combined with EcoAct, delivers low carbon strategy and an environmentally sustainable design to our clients. Sentient Science completes our portfolio for utilities with predictive maintenance solutions for wind farms. And Tier1, with central solutions for data wiping and recycling, brings a strong sustainable asset to our digital workplace solutions.

Quantum technologies for CO₂ capture

In July 2020, Atos announced a multi-year partnership with multinational energy company Total to explore the potential of quantum technologies to lead to a decarbonized, energy-efficient future. Leveraging Atos's unique Center for Excellence in Performance Programming and Quantum R&D Program, this partnership aims to use quantum calculation to identify new materials and molecules that will accelerate society's journey to carbon neutrality.

Atos and HDF Energy to develop the first green hydrogen data center

Atos and HDF Energy will develop a complete solution to power datacenters using so-called green hydrogen generated by renewable energy. The aim is to demonstrate a first full production center operated using electricity produced from green hydrogen in 2023.

Atos will deliver an end-to-end green datacenter solution by designing and providing the hardware, software and integration services. This includes using the most advanced artificial intelligence technologies to optimize energy consumption. HDF Energy will supply a power plant, generating electricity from high-powered fuel cells. These cells will be powered by green hydrogen produced from photovoltaic panels or wind farms.

This new solution will enable datacenter and cloud operators to offer a sustainable and reliable solution to their customers.

Leading the supercomputing pack

In 2020 we introduced JUWELS, the most energy-efficient supercomputer in its class worldwide, ranking in first place for energy-efficiency on the TOP100 list, thanks to our patented DLC (Direct Liquid Cooling) solution, which minimizes global energy consumption by using warm water up to 40°C.

JUWELS ranks alongside 30 other Atos supercomputers in the Green500, underlining our commitment to support our clients in their decarbonization objectives.

JUWELS will be used in research related to the climate, the environment, sustainable energy management and the properties of materials or brain research.

Atos now has 31 supercomputers in the TOP500, with a combined peak performance of 251 petaflops. Thanks to a steady stream of green innovations, each new generation of supercomputers is more energy-efficient than the previous one.

Interview with Paul Peterson, Head of Human Resources, Atos

**“In just three days,
we went from 80%
of employees working
in offices or customer sites
to nearly 100% working
from home.”**

Paul Peterson

Putting people first

In the context of the global pandemic, the health and safety of our 105,000 employees around the world is our first priority and in 2020 we ensured that we constantly adapted to our people's shifting needs.

The COVID-19 pandemic required a massive, rapid response for the health, safety and welfare of our employees. In just three days in March 2020, we went from 80% of employees working in offices or customer sites to nearly 100% working from home. We immediately put in place different support layers for employees suddenly working at home, many with family members working or homeschooling in the same room. This has included anything from access to mental health services through our employee assistance program to regular social interaction events, globally and locally, to ensure employees

were connecting with each other and maintaining a healthy work/life balance. For example, we organized virtual yoga and cooking classes, coffee breaks and end-of-week toasts. We hosted a Wellbeing@Work week with various events for social and emotional support, which were attended by thousands of employees.

We also adapted our learning capabilities so that employees could increase their education while at home, according to each individual's needs. Our employees earned 85,000 digital certifications last year – 40% more than in the previous year!

As the pandemic continues to impact our people, we will continue to adjust how we support their needs, which are ever-changing.

Decarbonization: a shared ambition

In response to employees challenging us to bring them programs that are not only carbon-neutral but carbon-positive, we are embedding decarbonization into many of our biggest employee benefits.

We launched a green car initiative in 2020 in support of our ambition for all Atos-owned vehicles to be electric by the end of 2024. This involves replacing 5,500 vehicles and supporting employees, country by country, with charging stations at homes and offices. We are already well on our way to having a completely green fleet.

In a revolutionary step, since 2020 management incentives are also based on internal carbon pricing. Each manager's achievement score is adjusted based on the amount of carbon their team uses in the bonus period. The carbon calculation measures things like travel, commuting costs, the costs of energy for a datacenter, laptop or cellphone – and working with carbon-neutral vendors. It's a way for Atos and its people to really consider the environmental impact of what we do each day, embracing decarbonization at every level of the company.

Keeping our people safe

To find out more visit the 2020 Universal Registration Document section 5.3 Social

In response to the COVID-19 pandemic, we swiftly deployed our digital workplace solutions and enabled 96% of our people to work from home. Employees who responded to the Great Place to Work survey said that:

98%
felt 'safe'

Creating value through Corporate Social Responsibility

Creating value through Corporate Social Responsibility

Developing the skills of our diverse and entrepreneurial workforce

Atos creates a welcoming environment for its talented people to develop their careers. Education, diversity, digital inclusion and entrepreneurship continue to be key priorities for Atos.

Supporting education through university partnerships

Atos has developed a new University Technology Partnerships framework to recognize the value of academic activities such as joint Research & Development, PhD students working within Atos teams, applying research topics in practice, University Chairs with joint customer funding and teaching and other curricula-related activities.

With over 100 academic engagements worldwide and an increasing geographical footprint, the program was launched in 2020 to further Atos's technology and research ambitions, while also delivering on our commitment to support the development of knowledge, education and science.

New Atos employer brand – The future is our choice

Atos aims to be a global digital employer of choice. The future of our business depends on retaining our talented people while also recruiting new colleagues. In September 2020 we launched a new employer brand, established on a solid Employer Value Proposition, which gives people an insight into what it is really like to work at Atos and the career development and mobility opportunities available both for prospective employees as well as existing employees who want to make an internal move.

The new employer brand tagline, At Atos, the future is our choice, relates both to our current employees and the talents willing

to join us to shape the future of digital impacting society as a whole, the future of our company and their own future.

Key digital and industry skills

As our people and their digital skills development are a key strategic priority for Atos, we expanded the "Be Digital" program in 2020 to further increase digital skills in three key areas: Industry Expertise, Digital Ways of Working and Digital Technologies. In 2020, the total number of digital certifications increased by more than 40% to more than 85,000. Employees also have access to a broad range of Atos University Academy programs which cover topics from SAP to HR, learning new languages and leadership.

Employees first

In 2020, 84% of positions at Atos were filled internally. This is thanks to the Atos Internal First program which aims to ensure career mobility for our employees inside the organization. The program offers internal careers fairs, job cafés, video testimonials from employees, and much more.

We are Atos 

We are Atos is an Atos-wide Employee Experience program. It covers wellbeing and the activities that are important to our employees connected to charity work and playing a role in our communities. It has five main tracks: diversity and inclusion, social value, wellbeing, life@work and employee experience.

Strategic research partnerships with academia

Training our future leaders

LAUNCH for talented employees who are early in their careers.

FUEL in cooperation with Cambridge University (UK), ECS-Institute for Manufacturing and the HEC business school (France).

GOLD for Business Leaders in cooperation with HEC Paris.

GOLD for Technology Leaders in cooperation with Cambridge University /and Paderborn University.

VALUE for Executive Leaders developed in partnership with INSEAD

Denise Reed-Lamoreaux,
Head of Diversity and Inclusion,
Atos

"I can't imagine an organization functioning correctly, ethically and progressively without having diversity and inclusion activities in place. You need your people to be aligned to a common culture of inclusivity and equal opportunity. This is a key element of an organization's success."

Promoting gender

Our Women Who Succeed program grew out of a need to identify women as successors for all key roles, and to prepare them for these positions. Support comes from the Group Management Committee, with mentoring opportunities, targeted learning programs, women's leadership development curricula, and tech talks presented by women in Atos's Expert and Scientific communities.

The launch of the Global Women's Executive Mentoring Program in 2020 partnered our talented women with members of our Group Executive Management Team to help prepare them to take on senior level roles in the company.

Our aim is for recruitment to reach 50% for women, an ambitious target for our industry that we are committed to attain.

The power of digital technologies to support inclusion

The COVID-19 pandemic highlighted the vital need to increase our focus on digital inclusion and accessibility to address the new situation of distributed, remote or home working for the majority of our people. Our accessibility specialists work across multiple countries and contribute to various disability inclusion initiatives, such as the International Labor Organization's global business disability network, the Business Disability Forum's

Technology Taskforce, the Valuable 500 and the W3C Web Accessibility Initiative.

In 2020, we became the first company to be recognized for our excellence in disability inclusion in two categories by Springboard Consulting, an expert in facilitating the active participation of disabled people in the global workforce, workplace and marketplace. Atos received awards for both our internal accessibility policy and for the comprehensiveness of our offering to help companies incorporate accessibility.

“Atos is deeply engaged in accessibility on multiple levels. We want to share the potential of technology to deliver inclusion for disabled customers and colleagues. Our offerings range from Accessibility-as-a-Service, accessibility testing and audits, to organizational consultancy of inclusive practices and policies. Technology empowers inclusion.”

Neil Milliken,
Global Head of Inclusion, Atos

Our commitment to ethical, transparent and sustainable performance

In this new era of ubiquitous, mission-critical digital services, excellence in ethics, compliance and sustainability is a strategic priority for Atos and for all our clients.

At Atos we are committed to ensuring that a culture of compliance permeates throughout our ecosystem, whether this is our top management setting the right tone for employees or third parties who work with Atos and who need to establish their practices comply with our standards. Compliance is a live process for all of us on a daily basis. High standards of ethics and compliance play a fundamental role in our success as a business. They are a competitive advantage that are highly valued by our clients.

Our expertise enables us to ensure that high ethical standards are built into our technology and digital innovations. This 'ethics by design' approach differentiates us from other players and positions us to lead the market in this new phase of growth.

In 2020, we revised our Group Code of Ethics to reflect the Atos raison d'être and to add information about inclusion in the workplace, human rights, data

protection and the environment.

We work every day to improve our compliance program and build on our successes. In 2020 this involved redesigning our corruption risk mapping process, formalizing antitrust guidelines and undertaking new internal communications initiatives, such as to promote UN Anti-Corruption Day.

For the first time we also made our annual compliance review publicly available, explaining in detail our compliance organization, activities and projects in our compliance program. The compliance review presents how Atos manages compliance risk throughout the risk management cycle of prevention, detection and remediation and ongoing monitoring.

Another major development in 2020 was an assessment of our Group Vigilance Plan which was revised to ensure improved effectiveness, governance and ongoing monitoring in line with the French legislation on the Duty of Vigilance.

Interview with Alexandre Menais, General Secretary and Chief Compliance Officer, Atos

**“High ethical standards
are built into our
technology and
our digital
innovations.”**

Alexandre Menais

Updating our approach to vigilance

In 2020, Atos undertook a comprehensive review of the methodology and approach in its Plan of Vigilance to ensure compliance with the French Duty of Vigilance Act which has recently come into force.

The review involved consultation with all key stakeholders directly involved in the prevention and mitigation of the risks related to human rights, safety and security and the environment in Atos's own activities and throughout its supply chain.

The Group Corporate Social Responsibility, Human Resources, Security, Legal and Compliance and Procurement functions of Atos were all consulted as part of this process. In France, the Duty of Vigilance Act establishes legal obligations for corporate social responsibility, not only in companies' own businesses but also throughout the supply chain. It applies to large organizations employing more than 5,000 employees in France or 10,000 employees worldwide.

Shaping the digital space

In every sphere in which we operate Atos is committed to taking the lead on digital innovation, transparency and ethics.

Building the global data economy with GAIA-X

In 2020, Atos co-founded GAIA-X to build a secure and transparent European data and cloud framework. The 22 founding members of the GAIA-X Foundation are digital leaders, industrials, academia and associations with a shared commitment to a transparent European process, openness and broad participation. GAIA-X initiatives will support the European Union's ambition to consolidate its leadership in the global data economy.

Building trust and interoperability for all cloud users and providers is essential for the creation of digital ecosystems. GAIA-X will address this challenge through a common set of policies, an Architecture of Standards and a set of Federation Services which bring together existing cloud providers and their services and in which data and applications can be handled in a way that ensures full control. It will enable organizations of all sizes and across all sectors to benefit from hyperscaler offerings in Europe while respecting a set of essential policies.

Promoting ethical and trustworthy AI with ETAMI

ETAMI, Ethical and Trustworthy Artificial and Machine Intelligence, is a collaboration between industry and academia towards the development and foundation of a European organization to support Conformity Assessment of the development and deployment of artificial intelligence (AI).

The initiative aims to respond to the perceived growing need for certification standards relating to the way that AI-enabled systems and products are conceived, developed, deployed and maintained. Whilst a number of principles,

regulations and standards already exist, there is currently no clear mechanism for transparently and systematically assessing relevant compliance across the increasing broad scope of AI use cases. The ETAMI program is designed to address this gap.

Five members of the Atos Scientific Community are involved in various ETAMI working groups on AI-related areas that include: best practices, standards, regulations, and lifecycle management. The objective of the work (which will continue throughout 2021) is to propose a public standard or framework for ethics in AI, as well as piloting the certification based on this standard drawing on a range of industry use cases. Partner contributions are made on a voluntary basis with all finalized output publicly available.

Delivering digital security with the Charter of Trust

As one of the founding members of the Charter of Trust with other leading global companies and organizations, in 2020 Atos reaffirmed its commitment to continue to foster an ecosystem of trust where knowledge is shared, innovation encouraged, and resilience against cybersecurity threats improved. Atos Group Security created a Charter of Trust (CoT) team to ensure we maintain compliance with CoT principles and security requirements. A substantial number of enhancements were made during 2020 to put in place many of the CoT principles.

In line with our work within the Charter of Trust working group on securing the digital supply chain, we have identified 17 baseline requirements and we have updated our security requirements for suppliers.

Our top 250 vendors are now provided with this information when receiving newly-issued purchase orders and are requested to acknowledge this information allowing Atos to strengthen its security approach towards its supply chain.

Corruption risk mapping

In 2020, Atos revised the methodology used to build its corruption risk mapping, in line with Enterprise Risk Management methodology (ERM), in order to identify and assess corruption and influence peddling risks. The exercise covered the entire Group.

To find out more visit the 2020 Universal Registration Document section 5.4 Governance

Creating value through Corporate Social Responsibility

For each key process identified in the Book of Internal Control (BIC) as containing a risk of corruption, top managers were asked to assess the risk types and scenarios derived from actual cases reported and other risk mapping exercises conducted within the Group.

The outcome of the 2020 Group Corruption Risk Mapping, including a mitigation plan to address global and local points of attention, was presented to the Group Management Committee and to the Audit Committee. The Group Management Committee will receive progress reports on a semesterly basis going forwards.

Keeping our workforce alert to ethical risks

The e-learning course on the Atos Code of Ethics is mandatory for all employees without exception. This module ensures a thorough understanding of Atos's ethical standards and how we promote fair practices in our daily business activities. In 2020, 98% of employees completed the module.

To complement the e-learning module on the Code of Ethics, ETO²S (Ethics in Tier One Organization School) specific classroom training sessions are organized throughout the Group which senior managers are required to follow as they are well placed to lead their teams by example.

In addition, to ensure a deeper understanding of the specific risks related to corruption, Atos uses an e-learning module prepared by Transparency International which is available to all employees and helps identify appropriate behavior in an operational context. It provides an in-depth understanding of the UN Global Compact's tenth principle against corruption and the UN Convention against Corruption as it applies to the private sector.

Integrating our sustainability strategy in our procurement and supply chain management

The Atos Procurement & Supply Chain Management team of 400 procurement professionals across 26 countries

coordinates anything from sourcing to contracting activities, together with 40 supplier managers who monitor our key contracts and 350 supply chain experts who manage, build, deliver and process our Big Data & Security and Unified Communications and Collaboration products. In 2020, we continued to improve performance in relation to our key KPIs: sustainable savings, maintaining cost competitiveness, introducing or reintroducing a consumption based approach to lower the cost base, further consolidating the number of suppliers and driving CO₂ emission reduction. This was achieved through innovative and collaborative approaches with our stakeholders and suppliers.

As a digital leader, Atos aims to streamline its procurement processes. In 2020 we created an end-to-end state-of-the-art digitalized procurement process using guided buying for ordering, electronic requests (E RFX) to support our sourcing process, automation technology (RPA) and chatbots to initiate purchase requests and reporting, together with analytics to transform data into information and ePO e-Invoices and e-Signatures.

To leverage and enhance mutual success with third party suppliers, we organized Atos's first virtual supplier day in November 2020. Our top 250 suppliers were joined by our CEO and members of the Group Management Committee to discuss our 2021 key themes of decarbonization, cost competitiveness, and go-to-market opportunities.

Over half of Atos's emissions come from our supply chain so this year we stepped up our sustainability actions by seeking to influence our partners to join our efforts to become net-zero by 2028. We designed our own supplier rating and reporting systems, increased our sustainability evaluation criteria for new procurement activities, and developed a team of decarbonization ambassadors across the procurement function to support both internal and external colleagues.

Interview with Aurelia Tremblaye, Group Chief Procurement Officer, Atos

"We organized Atos's first virtual supplier day in November 2020. Our top 250 suppliers were joined by our CEO and members of the Group Management Committee to discuss our 2021 key themes of decarbonization, cost competitiveness, and go-to-market opportunities."

Aurelia Tremblaye

Fulfilling the expectation of information using GRI and SASB Standards

The Atos non-financial statement included into the Universal Registration Document and into this Integrated Report is created according the guidelines of the GRI Standards and SASB Standards.

GRI Sustainability Reporting Standards are the most used global standards for sustainability or ESG reporting. Using this common framework Atos reports across a wide range of ESG-related topics with the aiming of providing clearer communication to stakeholders regarding sustainability matters, at the time than enabling any interested party to compare across companies and industries.

The "Software & IT Services" industry standard of the Sustainability Accounting Standards Board (SASB) provides to Atos the guidelines of a sector-specific standard helping to disclose information which is relevant for its sector.

The analysis of materiality performed during the reporting year identified the material topics that are important for the stakeholders and then Atos disclose the information and indicators that could satisfy the expectation of the main stakeholders.

Any stakeholder can use the GRI Content Index table included in page 74 and onwards to identify the Atos material information and find, following the references included, how Atos approach the topic and monitors the related specific disclosures. Stakeholders can also use the SASB Content Index table included in page 86 to identify the information and metrics requested by the Software & IT Services Sustainability Accounting Standard which are disclosed by Atos in the annual management reports (Universal Registration Document and Integrated Report).

For a quantitative review of the Atos's ESG performance the stakeholders can access to a wide range of indicators with values for the last 3 years presented in the section "5.5 Non-Financial Performance Indicators" of the Universal Registration Document. Those are identified by a code aligned with the specific disclosures of the GRI and SASB or by an Atos' internal code. For a fast ESG performance review anyone could access to the Atos web page where a short selection of indicators is disclosed.

Stakeholder information

GRI Standards Content Index

For the GRI Content Index Service, GRI Services reviewed that the GRI content index is clearly presented and the references for all disclosures included align with the appropriate sections in the body of the report. The service was performed on the English language version of the report. This report has been prepared in accordance with the GRI Standards: Comprehensive option. The overall process is assured by an external auditor. With this approach, Atos demonstrates that its extra financial performance disclosures are accurate and exhaustive. You can find below the entire GRI Standards Content Index table with general and specific disclosures.

Auditor's assurance letter

Report of one of the Statutory Auditors, on the social, environmental and societal information published in the integrated report.
Year ended December 31, 2020

This is a free translation into English of the Statutory Auditors' report issued in French and is provided solely for the convenience of English speaking readers.
This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

For the attention of the general management,

Pursuant to your request and in our capacity as Statutory Auditors of ATOS SE, we hereby present you with our limited assurance report on the social, environmental and societal information presented in the integrated report on pages 1 to 71 (hereinafter the "Information") for the year ended December 31, 2020.

Responsibility of the company

This Information has been prepared under the responsibility of the Corporate Responsibility Department in conjunction with the Human Resources Department, in accordance with internal protocols for measuring and reporting used by the ATOS SE (the «Reporting Criteria») at the company's headquarters within these Departments.

As disclosed in the integrated report, ATOS SE takes into account the GRI (Global Reporting Initiative) standards order to identify the main issues of corporate responsibility and select the indicators (KPIs «Key Performance Indicators») used to manage these issues and to communicate the performance of the Group externally.

Independence and quality control

Our independence is defined by regulatory texts, the French Code of ethics (Code de déontologie) of our profession and the requirements of article L.822-11 of the French Commercial Code. In addition, we have implemented a system of quality control including documented policies and procedures regarding compliance with the ethical requirements, French professional standards and applicable legal and regulatory requirements.

Responsibility of the Statutory Auditor

Based on our work, it is our responsibility to express a limited assurance on the fact that the social, environmental and societal information presented in the integrated report, taken as a whole, are presented, fairly, in all material aspects, in accordance with the Reporting Criteria.

To assist us in conducting our work, we referred to the corporate responsibility experts of our Firm.

We conducted the following procedures in accordance with the professional guidance issued by the French Institute of statutory auditors (Compagnie nationale des commissaires aux comptes) relating to this engagement and with ISAE (International Standard on Assurance Engagements) 3000¹.

Nature and scope of procedures

We have carried interviews with the people responsible of preparing the Information within the departments in charge of the data collection process and, when appropriate, those responsible for internal control and risk management procedures, in order to:

- assess the appropriateness of the Reporting Criteria with respect to its relevance, completeness, neutrality, clarity and reliability, by taking into consideration, when relevant, the sector's best practices;
- verify the set-up of a process to collect, compile, process, and check the completeness and consistency of the selected Data.

¹ ISAE 3000 – Assurance engagements other than audits or reviews of historical information

We determined the nature and scope of the tests and controls according to the nature and significance of the Information with regard to the company's characteristics, the social and environmental challenges of its activities, its sustainable development strategies and the sector's best practices. Concerning the Information that we have considered to be most important and identified, for quantitative information, by the sign ✓ in the "Main Key Performance Indicators" table in pages 48-50²:

- for the consolidating entity, we consulted the documentary sources and conducted interviews to corroborate the qualitative information³ (organization, policies, actions), we performed analytical procedures on the quantitative information and verified, using sampling techniques, the calculations and the data consolidation, and we verified their consistency with the other information presented in the integrated report;
- for a representative sample of entities⁴ that we have selected according to their activity, their contribution to the consolidated indicators, their location and a risk analysis, we held interviews to verify the correct application of the procedures and performed substantive tests using sampling techniques, consisting in verifying the calculations made and reconciling the data with supporting evidence. The selected sample represents between 18% and all the consolidated quantitative social and environmental data disclosed.

Regarding the other consolidated Information, we have assessed its consistency in relation to our understanding of the Group.

We believe that the sampling methods and sizes of the samples we have used in exercising our professional judgment enable us to express limited assurance; a higher level of assurance would have required more in-depth verifications. Due to the use of sampling techniques and the other limits inherent to the operations of any information and internal control system, the risk that a material anomaly be identified in the Information cannot be totally eliminated.

Conclusion

Based on our work, we did not identify any material anomaly likely to call into question the fact that the social, environmental and societal information, published by ATOS SE as requested by the GRI standards and presented in pages 1 to 71 of the integrated report, taken as a whole, are presented fairly, in accordance with the Reporting Guidelines.
