

Your trusted smartphone

With Hoox for business, transform the way you protect your communication and your data

Threats to mobile security are growing exponentially. They can impact your organization's finances, operations and image. Protecting your business is a major strategic challenge. Hoox for business is the only trusted solution that allows you to stay serene in all circumstances.

Hoox for business protects your communications and your data with a trusted device. An ultra-secure infrastructure provides a private store, with unprecedented functions such as secure conferences. It complies with the latest regulations, such as lawful interception.

Trust in a natively secure smartphone

Hoox for business protects your information and communications from attacks.

The solution is based on an Android platform with a double security level: not only are all communications encrypted (voice, messages and data), but the phone itself is integrally secured.

From now on, your mobile phone will not be a weak link in your privacy, your business or your organization. The device is

protected from intrusions, even when stolen. This prevents third parties from retrieving your messages, lists of calls or your applications data.

Keep working as usual, communicate simply!

Hoox for business is your trusted smartphone designed for business use. Ideal for professional use, its functionalities are there to increase your productivity: calls, SMS, Instant Messages, emails, IT access, applications - all secured.

Easy to use and intuitive, Hoox for business offers you a unique experience: a high level of security that stays unobtrusive.

Hoox for business offers features that are unique on a secure phone: secure Instant Messages and conference calls, support for legal interception and requirements such as MIFID II (Markets in Financial Instruments Directive).

Be productive, securely

Stay connected with your team wherever you are. Join your meetings while on the move. Gather your team instantly and without limitations. Share your data with trusted colleagues while preserving the confidentiality of your sensitive activities.

Hoox for business brings you peace of mind. No need to speak in a coded language or avoid exchanging confidential documents. Now, you can handle sensitive

data from your trusted smartphone in full compliance with your security policy.

Your time is valuable. Your Hoox for business smartphone is an extension of your company. Maintain the agility that you want!

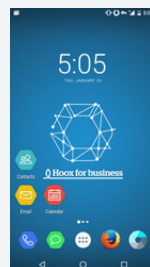

Choose an all-in-one security approach

To guarantee end-to-end security for your exchanges, Atos masters the entire mobile ecosystem - secure hardware, secure software layers, full encryption and strong authentication - in order to restrict the attack surface and increase defense lines. Your applications are verified and easily accessible via a private app store.

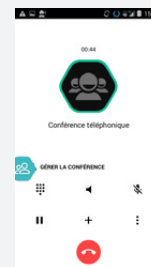

No need to change your IT infrastructure. Atos manages your Hoox for business smartphones on our platforms within a hosted solution. Your data is secured and centralized. Atos masters, secures and maintains over time each layer of the solution, independently from third parties. Hoox for business is the only secure communication solution to guarantee all these advantages.
