Build and maintain a successful project management office (PMO)

## Efficient PMO for healthcare environments

A critical success factor for running projects is the ability to blend a scalable project management methodology with your technology environment. Atos helps healthcare organizations adopt a proven methodology that takes advantage of best-practice processes and tools, and scales to any health information system.

Project Initiation

Project Planning

Project Execution & Control

Project Close

## The online PMO methodology tool

ProVantedge is a project management methodology and web-based toolkit with a firm foundation in Project Management Institute (PMI®) best practices. The systematic, content-rich ProVantedge process guides each project from initiation to close. And it goes much further, taking a tactical approach to building consistent and repeatable processes complete with the services and tools to create a sustainable PMO.

## PMO with a digital edge

Critical to each ProVantedge implementation is our collaboration with your IT vendor/s. We work with them to integrate their proprietary implementation methodology and deliver a solid project management foundation.

With that in place, our proven PMO methods and accompanying templates will get your project management office running quickly and cost-efficiently.

ProVantedge offers a standardized set of phases, activities and templates that align to PMI knowledge areas. These embody the major phases of managing a project:

1. Initiation
2. Planning
3. Execution and control
4. Closing

Each phase of the project is supported by tasks and a companion article describing best practices and sage advice from certified project managers. These project managers are also responsible for consistently updating the content. All screens in ProVantedge are interactive, allowing the users to drill down within the phases to view more details. In addition to the detailed article, each task has an embedded customizable template to support the PMO.

## ProVantedge advantage

### Robust content
