

WannaCry

Protecting against the next ransomware attack

230,000+

computers in over 150 countries were attacked by "WannaCry" within 1 day

\$1 Bn

has been spent on threats from ransomware with no end in sight

85%

of targeted cyberattacks are preventable through appropriate risk-mitigation measures

How can you protect your business

Run regular Security Risk Assessments to build an effective security strategy

Build a patch management and technology refresh program to keep operating systems, hypervisors, and applications up-to-date

Mobilize a Security Operation Center for real time Detection & Response

Have a strong data management strategy with backup and recovery for business critical and end user data.

Implement advanced persistent threat mitigation solutions

Run regular vulnerability scans & penetration tests

Educate employees

Ensure all emails are scanned & web access filtered

What can Atos do for you?

Atos can help you to architect, provide, build and implement your future state technology eco-system. Why not start today?

1

Identify your business risk

Workshop and discovery

2

Secure solutions to mitigate risk

Robust solutions and approach

3

Industry best practices to alleviate vulnerabilities

Technology transformation projects

4

Leverage lessons learned & security knowledge base

Benefit of best-practice tools & approach

5

Be confident in knowing your business is prepared

Planning for the future - mastering implementation

6

Monitor, detect and respond in real time to advanced threats

Security Operation Centers & Incident Response

Atos end-to-end cybersecurity capabilities

4500+

security professionals

14

Security Operations Centers

4

R&D Centers

3 million

endpoints secured by Atos

50 million

security events managed each hour

1.37 million

unique IPs scanned for vulnerabilities

3.5 million

IoT devices secured

Critical experience: over 400 IT security events per second during the Olympic Games with 0 impact
