

Healthcare in the Digital Age

Driving the value of health

What is digital healthcare? It is integrated data. It is patient insight. It is the foundation of comprehensive care. Digital healthcare is about getting the right information to the right person at the right time to make the right decision for patient care. It is about integrating people, process and technology into an orchestrated solution that delivers the best outcomes at the best cost. To get digital healthcare right, you need to be experts at data and at healthcare. Atos is that expert.

Digital solutions are transforming healthcare from volume to value by allowing more patient focused support. Atos believes in the value of health. That's why in 2017, Atos launched Digital Health Solutions for North America. We combine deep healthcare knowledge with global expertise in digital transformation. We modernize technology and secure patient data by optimizing and managing electronic health records (EHRs). We help providers maximize revenue, and help payers pay only what's due. We integrate that valuable data with financial systems to find unique insights about patients and members. Population health, precision medicine and value-based care programs help manage value for the patient and the health professional.

Technology Transformation

- ▶ Legacy Transformation
- ▶ Canopy (Cloud Services)
- ▶ Digital Workplace Services

Business and Clinical Transformation

- ▶ RCM Outsourcing
- ▶ Revenue Optimization
- ▶ Financial Advisory

- ▶ Clinical Adoption (HIMSS 7)
- ▶ Workflow optimization
- ▶ HiMed/HealthStation
- ▶ Biometrics

Cybersecurity

- ▶ Security Operations Center
- ▶ Network and Endpoint Protection
- ▶ Identity Governance
- ▶ Data and IoT Security

Patient Transformation

- ▶ Codex
- ▶ Analytics Consulting
- ▶ Population Health

Trusted partner for your **Digital Journey**

Atos

Driven by the desire to better serve the patient at the end of every keyboard, Atos, a \$13B global IT Services giant, entered the US healthcare market in 2015. While you may have heard our name associated with the Olympics or Disney, the Atos healthcare roots are grounded in the companies that formed our fast-growing division. Our digital health solutions are the technology foundation for more than 120 unique US healthcare organizations and more than 60 million patients today.

Technology Transformation.

With more than 25 years of U.S. healthcare experience, Atos experts can help you upgrade, transform and protect your technology to make data accessible and secure. In collaboration with you, we design and develop IT strategies, as well as support the management of your environment. Our approach includes selecting systems, managing cloud applications and data centers and driving adoption of those technologies within your organization. As a result, you have the freedom to work on more patient-centric projects to enable value-based health.

Cybersecurity.

Atos goes beyond safeguarding patient data across the entire network to protecting connected medical devices. From neutralizing known and new threats to securing vital patient data, we leverage the same security techniques and services used by the Olympic and Paralympic Games to protect your healthcare data 24/7.

Integrated solutions include: network and endpoint protection, identity governance, and data and IoT security. All are orchestrated by an intelligent control center that analyzes and stops threats before they can cause damage.

Business and Clinical Transformation.

A critical part of business optimization is transforming the clinical operations to match clinical output. An electronic health record (EHR) should improve, not hamper, clinical workflow. Just as important, clinicians need the right information to make the right decisions. From managing end-to-end revenue cycles to managing new, value-based care models Atos helps healthcare companies predict and minimize their financial risk.

Our clinical optimization solutions help healthcare organizations fully utilize their EHR and clinical data environments. Atos enables organizations to select, onboard and leverage EHR for collaborative clinical decision making for patients. Our consulting services, along with our complete back office enterprise solutions (utilizing ERP and WFM software) can help reduce training time by as much as 50-80%.

Patient Transformation.

Patient-centric transformation occurs when we identify patients at risk and enable providers and clinicians to address their needs effectively. This is done with predictive health insights and care management consulting that transform the patient and member experience.

With evolving models of care and utilizing medical and social data to make informed healthcare decisions, the opportunity for patient-focused industry transformation is upon us.

Value Driven Digital Solutions.

At Atos, our digital healthcare journey has just begun and touches millions of patients every day. To find out how you can leverage digital information to make the right decision for patient care, contact us.
