

Position paper

Tackling climate change

Contributing to a more sustainable society
by promoting digital solutions that reduce
the impact on the environment

Trusted partner for your **Digital Journey**

Atos

Global climate change is something for which we are all responsible. Conscious of its role to play, Atos initiated a pioneering and ambitious environmental program in 2008. Atos is committed to work to manage the challenges which climate change brings, now and in the future.

As part of the world effort to tackle climate change, Atos is progressively reducing its own energy consumption and carbon footprint. Atos believes that digitization and artificial intelligence offer significant opportunities to optimize the use of resources to reduce the overall impact of human activity.

Our commitments

To support the global effort to combat climate change, Atos has made **4 public commitments**, as part of the Cop21 Paris Agreement signed in 2016.

Atos is therefore strongly committed to:

- **Pursue science-based carbon emission reduction targets** to help limit the global rise in temperature below 2°C.
- **Implement internal carbon prices** to influence investment choices in favor of low-carbon options.
- **Engage responsibly in climate policy** by anticipating both the risks and opportunities associated with climate change.
- **Publicly disclose climate change information** in its main reports (challenges, targets, results, risks, opportunities...).

The Top Management (Group Executive Committee) and the Board of Directors are regularly informed of the progress made. This initiative is part of Atos' global environmental program supporting Advance 2021 strategic plan.

Transformation in action

Reduce carbon emissions...

- Climate-related action plans are effective since 2008 (energy efficiency, travel impacts, CO2 emissions).
- Atos succeeded in reducing its overall carbon emissions by 50% both in intensity and absolute terms during the period 2008-2015.
- Atos offsets 100% of its carbon, energy and travel emissions through a dedicated global wind farm program - which produce 109.6 megawatts and power approximately 40,000 households in rural areas. => Atos' clients can report "ZERO" in their own carbon reporting for the solutions they host in Atos datacenters.
- Atos' short-term carbon reduction intensity targets are among the Group's Strategic Development Plan objectives to reduce by up to 20% our CO2 emissions by revenue by 2021 (2016 baseline).
- Atos' long-term carbon reduction intensity targets (to reduce by 86% our CO2 emissions value add by 2050) have been approved by the Science-Based Targets initiative (SBTi) and are in line with the world effort to limit the rise of climate change below 2°C.

... to help tackle climate change

Decrease the use of fossil energy and reduce our overall energy consumption...

- Energy-related action plans are effective since 2008 (energy efficiency and consumption, decarbonized and renewable energy, travel).
- State-of-the-art strategic data centers progressively improve their average Power Usage Effectiveness (best PUE at 1.15 in 2018).
- Worldwide, in 2018, 95% of the energy used by Atos' strategic data centers comes from decarbonized sources (renewable + nuclear).
- In France in 2018, almost 100% of the electricity consumed by Atos comes from renewable sources (mainly hydroelectricity).
- In our fleet, the number of hybrid cars has increased by 177% and new remote collaborative tools gradually reduce the need for travel.
- 87% of our main sites are ISO 14001 certified. The most-recognized environmental certification to "walk the talk".

... to accelerate the energy transition

Spur innovative technologies...

- Atos welcomes the recommendations from the Financial Stability Board (TCFD - Task force on Climate-related Financial Disclosures) to assess and anticipate the consequences of climate change (risks, opportunities) whether in terms of prevention, mitigation, adaptation or transformation.
- Thanks to its business and smart digital solutions Atos is in a unique position to help its clients address their own environmental challenges - with smart grid solutions to save energy and maximize the use of renewable sources; smart travel & logistic solutions to reduce CO2 emissions; smart city solutions to reduce traffic and pollution, smart farming solutions to save water and increase crops...
- Atos is committed to deliver solutions that are not only eco-designed and energy-efficient, but also that contribute directly or indirectly to reach the 17 United Nations' Sustainable Development Goals.

... to contribute to a low-carbon economy

External recognition

Transparency

Atos is recognized by key players such as the **GRI** (Global Reporting Initiative), as a global leader for the quality and comprehensiveness of its CSR/Environmental reporting.

Climate change

Atos is recognized by key players as a global leader within the IT sector, based on its actions to reduce carbon emissions and mitigate the business risks of climate change:

- **EcoVadis** (Sustainable Supply Management): Atos 2018 overall environmental performance received an overall score of 78/100, compared to 40/100 for all companies in the IT activity sector;
- **CDP** (Carbon Disclosure Project): Atos is recognized as a global leader within the IT sector on the "2018 CDP Climate Performance Leadership Index" and was awarded an "A-" grade worldwide;

- **DJSI** (Dow Jones Sustainability Index): Atos 2018 overall environmental performance received an overall score of 87/100, compared to an industry median score of 31/100. Atos is part of both the World and Europe indexes and N°1 of the IT Service sector.

This level of recognition underlines the commitment of our organization and the hard work and dedication of all our employees at all levels.

About Atos

Atos is a global leader in digital transformation with 120,000 employees in 73 countries and annual revenue of over € 12 billion.

European number one in Cloud, Cybersecurity and High-Performance Computing, the Group provides end-to-end Orchestrated Hybrid Cloud, Big Data, Business Applications and Digital Workplace solutions through its Digital Transformation Factory, as well as transactional services through Worldline, the European leader in the payment industry. With its cutting-edge technologies and industry knowledge, Atos supports the digital transformation of its clients across all business sectors. The Group is the Worldwide Information Technology Partner for the Olympic & Paralympic Games and operates under the brands Atos, Atos Syntel, Unify and Worldline. Atos is listed on the CAC40 Paris stock index.
