

Atos and Red Hat support organizations create integrated smart cities

Paris, France, 9 May 2019

Atos is working closely with Red Hat to enable businesses and organizations to create 'smart cities' that can innovate and create new digital public services, based on Atos' Standardized IoT Platform.

By using this platform, IT departments and city developers are able to focus on creating new services and additional value for citizens. It allows for provision of a broad range of services and addresses issues in a manner that enables citizens to spend a happy and healthy life in the city – for example: air quality monitoring; smart transportation solutions via connected buses and fleet management; and better management of emergency services and vehicles.

This scalable, flexible, adaptable and secure platform is supported by 200 organizations worldwide. It is based on the [oneM2M global standards initiative](#) for Machine to Machine communication and IoT enabling the seamless interoperability of smart sensors and devices (e.g. for smart cities). The Smart City Platform is realized with Atos Managed OpenShift (AMOS), a managed service for the world's leading container Platform, RedHat OpenShift.

Smart Cities are just one of the many use cases for the platform. The platform is adaptable and suitable for a number of applications within banking and financial services, life sciences, insurance, manufacturing, retail, logistics, travel and telecoms, to name a few.

Atos is present at the [RedHat Summit](#), which takes place from 7-9 May, in Boston.

About Atos

Atos is a global leader in digital transformation with over 110,000 employees in 73 countries and annual revenue of over € 11 billion. European number one in Cloud, Cybersecurity and High-Performance Computing, the Group provides end-to-end Orchestrated Hybrid Cloud, Big Data, Business Applications and Digital Workplace solutions. The group is the Worldwide Information Technology Partner for the Olympic & Paralympic Games and operates under the brands Atos, Atos Syntel, and Unify. Atos is a SE (Societas Europaea), listed on the CAC40 Paris stock index.

The purpose of Atos is to help design the future of the information technology space. Its expertise and services support the development of knowledge, education as well as multicultural and pluralistic approaches to research that contribute to scientific and technological excellence. Across the world, the group enables its customers, employees and collaborators, and members of societies at large to live, work and develop sustainably and confidently in the information technology space.
