Atos

ASIP, Atos Smartcity Interoperability Platform based on Red Hat solutions

To develop new innovative user applications, cities need to embrace open data initiatives. smart city use cases, there is a need for an interoperability layer aggregating heterogeneous sources.

Our solution, ASIP, implements European & IoT standards with full access to various data originating from sensors and different platforms. ASIP is a cloud-based solution using Red Hat OpenShift deployment capabilities. Experience has shown that this solution yields minimum time to market—it's what makes Versailles, France a smart city—and it can be deployed in private or public clouds.

In this session, we'll show our elastic smart city solution with real examples, covering:

- A multifleet management system to mobile applications for smart city users.
- Supervision of all IoT devices.
- IoT maintenance workflow.
- Detecting security, or breakdown, issues.

You'll hear how the partnership between Red Hat and Atos-managed OpenShift pushes innovation and solves smart cities problems.
