

Virtru Breakout session
11 09 2019 – 16.40

Data Centric Security
Protect Data Wherever It's Created
or Shared without Business Disruption

Jonathan Morgan
EMEA Director, Virtru

Data Centric Security

Protect Data Wherever It's Created or Shared without Business Disruption

- ▶ As Companies deploy Digital Transformation programs and move their environments to the Cloud, they often find that existing solutions are difficult to transition and hinder this process. This in turn compounds the effectiveness of the business, and its employees ability to be productive, collaborative and efficient.
- ▶ Virtru's Data Centric Security platform removes the issue of having to choose between protecting data and sharing it, by allowing you to ;
 - Immediately take control of your data and enhance your existing security investments
 - Easily secure data as it is created and shared inside and outside your organization
 - Collaborate with confidence while maintaining visibility and full control of data wherever it resides

Data Centric Security

Protect Data Wherever It's Created or Shared without Business Disruption

Jonathan Morgan

EMEA Director, Virtru

Jonathan Morgan brings a deep knowledge of enterprise security and data protection requirements to his role as EMEA Director at Virtru. He has spent the last 20 years working closely with security leaders at the worlds largest and most complex organisations to gain a detailed understanding of their needs, develop trusted relationships, and to deliver solutions solve their most pressing problems.
