

NetApp Demo session
11 09 2019 – 18.30

Any Cloud.
One Experience

Matt White
Principale Architect, Cloud Infrastructure

Any Cloud. One Experience

It's your data and your business, but not always a single location. Consume cloud on your terms, one seamless experience everywhere, including on-prem, that's the goal. Move applications across your environment to and from any cloud. And that's what your data fabric should be designed to deliver

Matt is a Principal Architect on the Cloud Infrastructure team. He is a software development and IT veteran with more than 20 years of experience in various roles.

Starting as a lab guy in quality assurance at US Robotics and progressing through the ranks as a software developer to pre-sales engineer before finding himself as the VP of software development at a small company creating software for FlexPod. This is where he realized the power of DevOps and container based software development.

NetApp, finding the value in the FlexPod software stack acquire his company in 2017
