

Atos Breakout session
12 09 2019 – 10.00

Lets Make a dish – Continuous
Automation can be simple

Jaroslav Gajewski

Lets Make a dish - Continuous Automation can be simple

Expert Community 

Abstract:

Continuous Integration and Continuous Delivery is extremely popular on recent days. Cloud Native applications are growing on the market rapidly. Public cloud sector is trending and growing. All of that looks great but there is still huge footprint of on-premise infrastructure that are expected to be used in enterprise.

During the session I'd like to take you into journey of automation for cloud infrastructure. On 1st station we will answer for Five Ws in terms of challenges in cloud solutions deployments and lifecycle management served with How at the end. Second station will demonstrate cloud agnostic capabilities and flexibility for presented solution and both customer and Atos benefits. Journey will be finished with demo for "How" implementation.

Criteria relations:

Strategic Alignment

Automation and cloud are key pillars for Atos.

External Benefits

Significant decrease of time to delivery for private and public cloud services.

Almost marketplace approach, choose what you want.

Internal Benefits

Operational cost reduction for cloud services delivery and maintenance

Simplicity

Technology Leadership

Idea is already implemented by me in DPC. Next

Wow-Factor

New approach for multicloud and hybrid cloud management. Simplicity and innovation that provides managed or unmanaged cloud for customers in 1 day.

Lets Make a dish - Continuous Automation can be simple
