
Angers Industrial site & supply chain

Trusted partner for your Digital Journey

Atos

A high added value industrial & logistics facility

Located in Angers, Atos' industrial and logistics site is responsible for the management of the supply chain, industrialization, manufacturing, integration and tests of high technology IT products, as well as the validation of customer solutions.

As part of the Big Data & Security division, the Supply Chain & Manufacturing entity is responsible for validation and industrialization, in close collaboration with the Group's Research and Development teams, including:

- coordination and overall control of the supply chain, from sourcing to delivery,
- assembly, test and personalization of servers and supercomputers,
- customers configuration validation before delivery,
- collection and processing of end-of-life products,
- procurement and distribution of spare parts, ensuring stock optimization and cost reductions.

Industrialization expertise in technology

A strong partnership with Research & Development teams enables us to define the resources we need to put in place in order to implement the manufacturing and logistics processes from the earliest stages in the design of a new server. This involves piloting the introduction of new offerings with a view to their future commercialization, moving from a logical concept designed by researchers to physical fabrication by a technician, so as to guarantee that the product will be successful.

A competitive Supply Chain

The operation of the supply chain guarantees the optimization of all production flows from purchasing right through to delivery at the end customer's site, end to end, with no disruption to any of the processes involved. The ultimate aim of the supply chain is to deliver high quality products to customers, at requested date, at the best price, and environmentally friendly.

Configuration to customers' requirements

The entire solution ordered by the customer is the responsibility of individual integration and testing units: every customer need is different, every order is unique. Once a customer order is received, the processors, memory, cards, disks and other peripherals are assembled in the servers. System and drive trays, as well as other elements that have been ordered are mounted and cabled in the rack.

Global HPC Test Lab

To build increasingly efficient digital infrastructures, it is essential to provide industrial and logistics services which are specifically adapted to each customer's requirements. The Test Lab allows customers to test and validate their solution before delivery thanks to our secure and favorable environment (personalized reception, control rooms, adapted tools, collaborative space).

Citizenship approach

Our desire to contribute to environmental protection and sustainable development is reflected in its total commitment to a citizenship approach. This has already been materialized by having our industrial system certified and ensuring conformance with the AFAQ reference system. The industrial and logistics site is one of the first 100 companies to have developed an integrated HSQE (Health, Safety, Quality, Environment) management system.

About Atos

Atos is a global leader in digital transformation with over 110,000 employees in 73 countries and annual revenue of over € 11 billion.

European number one in Cloud, Cybersecurity and High-Performance Computing, the Group provides end-to-end Orchestrated Hybrid Cloud, Big Data, Business Applications and Digital Workplace solutions. The group is the Worldwide Information Technology Partner for the Olympic & Paralympic Games and operates under the brands Atos, Atos Syntel, and Unify. Atos is a SE (Societas Europaea), listed on the CAC40 Paris stock index.

The purpose of Atos is to help design the future of the information technology space. Its expertise and services support the development of knowledge, education as well as multicultural and pluralistic approaches to research that contribute to scientific and technological excellence. Across the world, the group enables its customers, employees and collaborators, and members of societies at large to live, work and develop sustainably and confidently in the information technology space.
