

Infrastructure Penetration Test

Infrastructure Penetration Test

A real life example and our results

Mission

Compromise the infrastructure of the client

Time frame

100 hours

Condition

We were given **access to the premises** and an **ethernet connection** to their internal network, but **NO** user credentials or privileges

Process

Throw a wide net to cover as much ground as possible
Find low-hanging fruits

Happenings

On the first day we **raised a critical incident**, as we found a machine that was already compromised. That server was pulled offline immediately

Results

- ▶ Taking over the server hosting the **CCTV system**
- ▶ Acquiring several **administrator passwords** for critical services running
- ▶ Getting access to several **workstations**
- ▶ Pulling **salary and customer data** from their servers
