# Penetration Testing-as-a-Service

Atos

## **Penetration Testing as a Service**

A modern approach to attack and help implementing mitigations

### Problem in the existing format

While we pointed out the security holes in client's IT landscape, there was nothing that ensured the (correct) implementation of the recommended remediations.

#### **How PTaaS helps**

Allows us to run parallel tracks during a penetration test

- ► Continuously test critical components of our clients' services
- ► Solve vulnerabilities with the remediation implementing team

#### **Benefits gained**

▶ Directly follow up on the situation every time a vulnerability is said to be mended, we can confirm that the problem has been solved by testing for that specific vulnerability

Penetration Testing as a Service (PTaaS) is the result of yearlong collaborations with our clients
