

Connected Cooler

Engage nearby consumers, visually monitor stock levels, and optimize your assets

In this document, you can learn about the Atos approach on professionally dealing with the deployment and management of a combined IoT, analytics and artificial intelligence solution.

To get up and running quickly and with minimal risk, the solution has been simplified for you into a single off-the-shelf offering.

The solution can typically be implemented within two to three months, while a small pilot can start within two weeks.

Commercially, Atos is offering Connected Cooler for Food & Beverages (F&B) companies in a pay-as-you-go model. This allows you to start small with minimal investment and scale up quickly, seeing the business benefits outreaching by far the cost of the solution.

With already more than a million coolers connected across the globe and many years of experience in successful deployments of IoT & Analytics projects, you can benefit from this experience while rolling out the Connected Cooler Solution and building a digital business roadmap.

Leveraging its global scale and expertise in consultancy and business integrations, Atos helps you to explore new insights and design new business models.

Atos provides the solution as part of a tailored Managed Service for Connected Coolers

Connected Cooler is delivered with the following services:

- operated remotely from one of the IoT Global Delivery Centers, closely working with partners and third parties to orchestrate a seamless service.
- the Connected Cooler solution can be supplemented with additional integration or development, or onsite installation services.
- additional services like 1st level support, help and interaction center, installation services etc.

A modular approach, aligned with your business needs

Depending on your need, you can select modules, or the entire integrated service. These modules are:

- up to full global reach: **Deployment to Coolers Solution**
- lowering IoT solution costs: **Coolers Infrastructure managed service**
- improved security and compliance: **IoT Platform managed service**
- adopting your business needs: **Application development**
- creating trust and adoption for consumers: **App managed service**
- 360° view on your distributed assets: **Coolers Managed Connectivity service**
- faster response times to interoperability: **Service Orchestration**
- internal adoption: **Staff Training**
- any other demand: **Data Science Services**

You can rely on Atos as the main contractor overall responsible for the Managed Service of the solution, working closely with partners and 3rd parties to orchestrate a seamless service.

Extend your connected cooler into a full Digital Business through other Atos products and services
