

Intelligent Collaboration Citizen Developer

Atos – leaders in employee experience supporting citizen developers to accelerate and adopt digital transformation using Microsoft Power Platform apps.

In today’s digital-centric world, business priorities are evolving towards app development, automation and workplace modernization. To succeed in a highly competitive marketplace, organizations must automate workflows and business streams, integrate data assets and value streams, and innovate their offerings, employee and customer interactions.

A citizen developer is someone who develops with low code, no code, business intelligence (BI) or robotic process automation (RPA). Atos offers organizations support for citizen developers, allowing anyone to build Microsoft Power Platform applications.

Rolling out Atos Citizen Developer:

- Accelerates the creation of new products and services
- Enhances process efficiency and automated workflows
- Drives widespread innovation throughout the organization
- Enables costs cutting and build resilience in volatile times
- Accelerates digital transformations and project-based work

A low code platform empowering users to (co)-create business value

Low Code means no need for professional developers

Today organizations expect a low-code platform to provide business user-friendly usability, adequate enterprise app integration and seamless integration with productivity and collaboration apps. Integrating industry-specific vertical software within the same collaboration tool enables contextual interactions for faster, more accurate decisions. The new collaboration technologies use low code applications, bots and APIs to open massive opportunities for line of business workflow automations.

The Atos Citizen Developer service enables a culture shift in organizations. Companies can develop power platform automations, analytics and workflows themselves using low-code/no-code apps with expert support from Atos.

Why Atos?

The IDC survey of 450 customer sponsored by Atos and Microsoft has given Atos insights into the key customer benefits for low-code and why most customers are building their own Centre of Excellence groups for development. But companies have recognized they need expertise and support to understand how to get the best out of the Microsoft 365 Power Platform apps. Atos is an ideal partner because we have implemented a lot of Power Platform automations for customers and have vast experience providing managed services around M365.

Citizen Developer use cases
No code/low code development

Citizen Developers accelerate organizations' digital transformation

To succeed in a highly competitive marketplace, organizations must automate workflows and business streams, integrate data assets, and value streams, and innovate their offerings, employee, and customer interactions.
