Migration Assessment Workflow

# Most organizations have their sights set on the cloud

... but are often stalled getting there.

81%

of organizations are **working with two or more public cloud providers** giving them freedom to use the best cloud for each workload.

Gartner Research: Cloud

EVIDEN

servicenow.

Traditional cloud migration processes impede productivity and profitability.

Migration Planning

High intensity, manual effort.

Relevant parties have day jobs.

Data points largely based on tribal knowledge.

Migration Implementation

Reality moves faster than the re-planning process.

Expanded timelines and inflated costs.

Manual processes lead to increased security risks.

Lifecycle Management

Management and governance starts from scratch.

Poor documentation and compliance trails
for cloud governance.

Scattered emails and reporting hinder ability
to see the full picture.

Accelerate
cloud migrations
with a workflow-driven approach

Break down traditional cloud migration barriers and accelerate time to value using

Reliable, live discovery data.

One centralized hub for migration planning.

Process visibility.

EVIDEN

Get reliable real time data

Access comprehensive LIVE discovery data fast to support timely and confident decision- making.

Collect unified insights across various cloud-native tools and datacenter/cloud discovery tools.

Receive right-sized recommendations based on personalized performance data.

Unify migration planning

See and correct timeline risks faster with migration-related activity all in one place.

Create migration assessments, plans, and timelines in a centralized hub.

Identify gaps in data and processes to plan cloud migration waves more efficiently.

Expand process visibility for all stakeholders

Avoid miscommunication and false starts by keeping the right people informed and aligned.

Reduce unnecessary controls, which hinder the migration.

Identify and resolve friction points before impacting the timeline.

Drive down migration costs **with efficient processes**

Improve process efficiency and reduce capital investments with

A tight, well-scripted process.

A unified platform.

Continued reuse of investment.

Implement a tight, well-scripted process

Leverage secure, digital workflows powered by live data to tighten migration processes.

Improve visibility and reporting to help teams anticipate and reduce costly issues.

Maximize efficiency on a unified platform

Streamline processes from pre-migration to post-migration, including workflows to plan and create project tasks.

Reduce or eliminate the dependence on multiple, disparate third-party discovery tools that require manual intervention to manage.

Continued reuse of investment

The migration process leaves behind the service maps, data models and processes you need to manage your new cloud-based estate.

Cloud management structure is there day and is updated in real time in future.

Manage the cloud lifecycle
with a unified operating model

Manage the future of your applications in one place – no matter where they go next with

A single pane of glass.

End-to-end security and compliance.

Centralized migration management.

EVIDEN

servicenow.

Leverage a single pane of glass

Unify cloud governance with a model that spans on-prem, edge, and cloud resources.

Improve visibility across all applications, processes, and data.

Gain end-to-end security and compliance

Prepare clear, auditable records of migration costs, decisions points, and approvals in one place.

Support cloud security and posture management with a pre-scripted, compliant process.

Centralize migration management

Unify communications and reporting in one hub.

Engage stakeholders in one place, using role-based permissions to provide governance and approval guardrails.
