## Identity Governance and Administration

Boost your business and secure access to all your applications

How to ensure that only the right people access the right resources at the right time, with the required rights and for the right business reasons?

How to ensure compliance with regulations, manage and reduce risks and facilitate the movement of the business individuals across business-defined zones?

How to secure access applications like SaaS? These are some of the issues you have to deal with when you move to the cloud.

Evidian Identity Governance and Administration (IGA) provides a comprehensive solution for all these issues.

- Organizes and unifies applications across your organization
- Automates the access review process across your organization
- Automates the role management process across your organization
- Provides dashboard for role management

Designed for medium and large organizations, Evidian IGA provides a comprehensive solution for all your identity and access management needs. It offers a unified view of all your users, roles, and permissions, making it easier to manage and govern your organization's digital assets.

Do your users have the required level of access?

Yes, compliance reports may also be requested. To meet these requirements, Evidian IGA provides a comprehensive solution for all your identity and access management needs.
