

## **Atos Cloud Backup for AWS, powered by Dell Technologies, centralizes the management of data replication and data recovery in the cloud and on-premises**

**Paris, France – February 19, 2025** – Atos today announces the launch of Atos Cloud Backup for AWS, a fully managed data protection solution using Dell PowerProtect Data Manager in the cloud and Dell APEX Protection Storage. This solution protects all AWS workloads and allows data replication from various on-premises and cloud providers for disaster recovery or additional copies of customers' backup environments.

As public clouds host an ever-increasing volume of sensitive data, it is crucial to implement data protection measures to prevent data loss and ensure data remains secure and retrievable. Organizations shifting workloads to the public cloud while managing complex hybrid cloud infrastructures need a backup and disaster recovery solution that meets their ever-expanding needs and that remains cost-effective.

Atos Cloud Backup for AWS provides various options for data replication to the cloud or other locations, protecting organizations against data loss and enabling the deployment of disaster recovery plans from a centrally managed entry point. Atos Cloud Backup for AWS automates deployment of Dell's PowerProtect Data Manager and Dell APEX Protection Storage on AWS, saving time and minimizing complexity.

Atos manages the infrastructure while customers operate the backup of their servers through a single interface for cloud and on-premises environments with automated monitoring and reporting for informed decision-making, reduced time and effort. Atos combines Dell's PowerProtect Data Manager on AWS and Dell APEX Protection Storage with fully managed services for the AWS platform, providing a cohesive, end-to-end experience.

By centralizing control, enhancing security, and leveraging the power of AWS and Dell Technologies, Atos Cloud Backup for AWS provides businesses with a reliable and scalable approach to data protection whether for disaster recovery, compliance with data immutability, or operational efficiency. It complies with the latest DORA and NIS2 legislations.

Atos Cloud Backup is part of the Atos Hybrid Cloud and Infrastructure business line and is available for AWS on [Atos CloudCatalyst](#). This fully managed portfolio offering provides standardized, secured and compliant cloud environments and operations. Atos CloudCatalyst includes [Atos' managed landing zone solution](#) which leverages the cloud-native AWS Landing Zone Accelerator and Control Tower services to deliver a sovereignty-

ready, highly secure, fully automated, scalable and resilient platform, adaptable to regional sovereignty constraints.

### **About Atos**

Atos is a global leader in digital transformation with c. 82,000 employees and annual revenue of c. € 10 billion. European number one in cybersecurity, cloud and high-performance computing, the Group provides tailored end-to-end solutions for all industries in 69 countries. A pioneer in decarbonization services and products, Atos is committed to a secure and decarbonized digital for its clients. Atos is a SE (Societas Europaea) and listed on Euronext Paris.

The [purpose of Atos](#) is to help design the future of the information space. Its expertise and services support the development of knowledge, education and research in a multicultural approach and contribute to the development of scientific and technological excellence. Across the world, the Group enables its customers and employees, and members of societies at large to live, work and develop sustainably, in a safe and secure information space.
