

Cybersecurity Advisory Services: How we work

1. Understand your unique landscape
2. Design your strategy
3. Implement and integrate seamlessly
4. Empower your people through training
5. Monitor, measure and refine

Atos

01

Understand your unique landscape

We begin by discussing your business goals, regulatory needs, security posture, risk tolerance, and challenges. This allows us to design customized frameworks for your cybersecurity strategy.

02

Design your strategy

Our teams collaboratively create a customized security strategy and plan. We set clear objectives, prioritize initiatives, optimize your current investments, and provide detailed roadmaps and expert guidance.

03

Implement & integrate seamlessly

We partner with you to put the agreed-on strategies into action. We deploy new security tools, establish strong governance, enhance data protection, and integrate security throughout your supply chain.

04

Empower your people through training

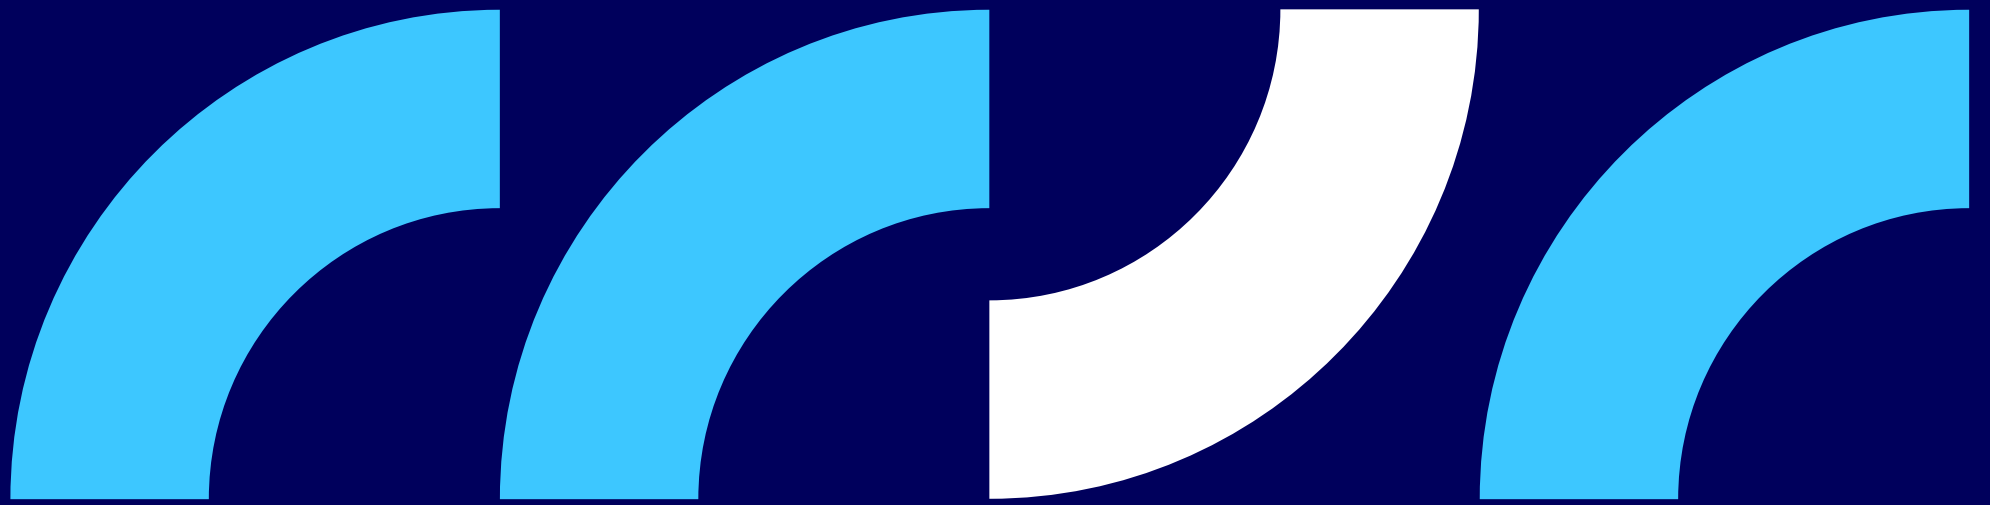

Our experts provide tailored cybersecurity training and awareness programs for various roles, covering foundational knowledge, advanced technical skills, and executive strategy to foster a security-aware culture.

05

Monitor, measure and refine

We implement continuous monitoring processes using tools like our enterprise security dashboard for real-time visibility. We assess how well your controls are working, proactively find areas to improve, and ensure your security stays ahead of the curve.
