GO BEYOND

Connected. Intelligent. Resilient
Go Beyond with Atos and SAP Business Suite

A brief introduction: the journey to SAP Cloud ERP

Like any enterprise technology, Enterprise Resource Planning (ERP) systems follow a path of perpetual modernization. It's been an interesting journey to date, starting in the 1960s and 70s with Materials Requirements Planning technology that slowly expanded to include additional functionalities like finance, quality assurance, and equipment maintenance.

Then, by the 1990s, we had the first true ERP systems that covered all core business processes. Growing to incorporate tools like Customer Relationship Management (CRM) apps and business intelligence capabilities, ERP became defined by a monolithic construction that was exponentially growing in complexity with every year and added piece of functionality.

Fast forward to today, and these inherent limitations are further exposed every time an organization attempts to scale, innovate, and adapt at speed to new challenges or opportunities.

A reality that underpins the development of SAP Business Suite – a modular cloud-based solution that integrates mission-critical applications, real-time data, and advanced AI into one seamless system. Capabilities that together define the future of enterprise management, by helping optimize every part of your business – from finance and HR, to supply chain and customer experience. The result being a powerful technology platform able to drive transformation like never before. All with the ultimate purpose of driving greater efficiency, accelerating innovation, and truly realizing a more dynamic form of business agility.

Goals made more tangible with the introduction of expert delivery support – which is where Atos enters the picture.

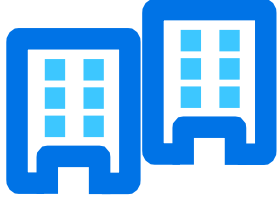

Points of departure

Understanding where you're coming from is as important as knowing where you're going

Every organization has a different starting point for ERP modernization. A 'square one' that's defined by differing levels of maturity, legacy capability, and strategic priorities. Against this backdrop, a One Size Fits All solution rarely applies. Which is why it's always important to create a clear picture of where you are today, the top-level business needs driving change, and the priorities shaping any future state.

The answers will always be different by organization, but will often sit within more generic engagement models – including:

	 Start Up	 Legacy ERP	 ECC to Greenfield	 2-Tier ERP	 Divestment
Status	• Company less than 2 years old • Has inadequate IT systems to support its business	• Company running old ERP • Established processes are no longer fit for purpose	• Corporate functions running on ECC • A lot of custom code • Needs a business process reset	• HQ running S/4 Private Cloud • Divisions or Countries too small to adopt S/4 Private template	• Company looking to sell off division / subsidiary • Requirement to move division off existing S/4
Drivers	• Business growth • Adopt best practices • Change the business not the system • Low TCO	• Renewal too expensive • Losing customers due to poor systems • Unable to grow and compete	• Cost of maintaining custom code too high • Lack of ability to adopt best practices • No access to Business AI advantages	• Simplified processes needed in divisions or countries • Lower TCO for subsidiaries	• Time critical requirement to move division off existing S/4 • Financial penalties if not achieved
Priorities	• Rolling adoption of new features • Access to Business AI • Finance first then expand	• Organisational & Process Change Management consulting and advisory paramount • Burning platform risks • Legacy data migration critical	• Immediate Organisational & Process Change Management consulting • Design Thinking W/shops to uncover new value • Data migration critical	• RAPID deployment approach • Maintain HQ finance structures • Leverage Central / Shared Services	• RAPID deployment approach • Reuse not reinvent • Once carved out, expand and consume new features

Introducing SAP Business Suite

Unlock value across your organization and maximize the impact of on-going transformation.

SAP Business Suite connects every function inside a business with the shared visibility and insights needed to inspire faster, data-driven decisions. Outcomes made possible through the embedding of AI and real-time analytics that help transform information into action-ready insights, thereby enabling you to better anticipate change and optimize operations. This is the 'last mile' in the journey toward a more agile, resilient enterprise – and one that's ready to scale, compete, and lead in a world defined by constant disruption.

A strategic platform built for ambition

Setting the ambition

Building a business case that's anchored on tangible and measurable benefits

As with the point of departure, it almost goes without saying that the strategic ambitions surrounding SAP Business Suite can also differ widely. That said, while organizations inevitably pursue distinct outcomes, these can be broadly aligned to three core categories:

Optimized operations

Where the goal is to quickly realize the benefits and value of SAP S/4HANA Cloud:

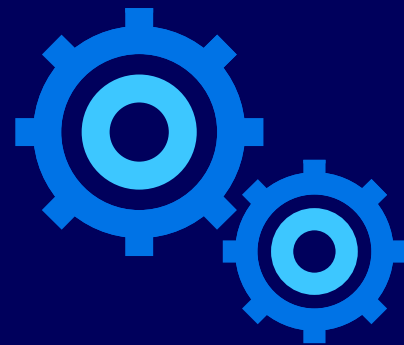

One intelligent platform: unifying finance, supply chain, procurement, HR, and customer engagement to operate as a single, connected operation.

End-to-end visibility and control: enabling teams to identify inefficiencies, reduce duplication, and make informed adjustments that enhance performance and reliability.

Operational alignment: ensuring every process, investment, and resource directly contributes to the organization's long-term strategic roadmap.

Real-time agility: where every response to market disruption, supply challenges, or emerging customer opportunities is dynamic and informed.

Productivity at scale: through process automation, standardization, and best-practice workflows that improve throughput and resource utilization.

Action-ready insights

Where real-time, predictive intelligence turns data into a source of strategic advantage.

Transforms enterprise data: integrating SAP and non-SAP sources to create a single, trusted view of business performance.

Analytics and AI across every function: surfacing predictive insights, trend analysis, and scenario modelling directly into day-to-day workflows.

More confident decision-making: enabled by the foresight needed to anticipate change, mitigate risks, and seize opportunities ahead of the competition.

Real-time intelligence: replace static reports with dynamic insights that guide decisions at the speed of business.

Continuous optimization: where the on-going refinement of machine learning models acts to drive smarter operations and more accurate forecasting.

Transformative impact

Where you unlock growth, innovation, and resilience through intelligent, connected systems.

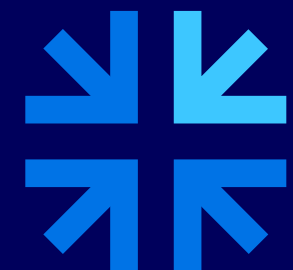

Power reinvention: connecting people, processes, and data creates an adaptive enterprise architecture that accelerates digital transformation.

Enable new business models: maximize your business' flexibility to experiment, diversify, and innovate without disrupting core operations.

Amplify human potential: the combination of AI and automation frees up talent from manual tasks to focus on creativity, strategy, and customer impact.

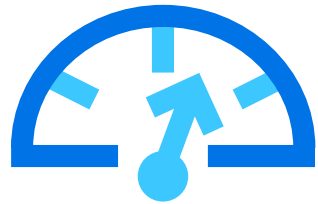

Measurable transformation: align technology modernization with tangible outcomes in efficiency, security, and sustainability.

Tomorrow-ready: using intelligence, agility, and innovation to set the pace of change and disrupt competitive offerings – rather than playing catch-up.

SAP Business Suite Go BEYOND with Atos

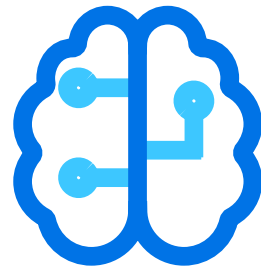

We help deploy ready-to-run SAP Business Suite that delivers the latest industry best practices and continuous innovation.

Accelerate business performance

to deliver instant results and quickly tackle top strategic priorities:

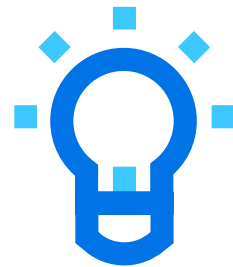

- Integration expertise across functions
- Accelerators and automation frameworks
- Rapid implementation methodology and tools
- Cloud-native architectures for rapid change

Boost efficiency & agility

by staying competitive to maximize both the top and bottom lines:

- Analytics accelerators to unify SAP & non-SAP data
- End-to-end best practices for standard and industry processes
- Context-rich dashboards for insight, speed, and efficiency
- Tailored SAP solutions for industry-specific outcomes

Keep innovation moving

by combining intelligent automation, AI, and clean-core modernization:

- AI and Agentic AI frameworks for SAP
- Preconfigured industry best practices
- Extensible SAP Business Suite solutions
- Full SAP Cloud ERP that grows with your business

Go BEYOND with Atos

20-30% reduction in project costs with Atos Advanced Preconfigured Solutions (APS).

>1000 pre-configured, documented, and tested processes available for multiple industries.

Deliver new features with minimal disruption and maximum continuity..

Up to 40% faster migrations of BW to SAP Business Data Cloud.

Automated SAP accelerators for Snowflake integration.

Access 600+ technical objects for SAP BTP – and more than 2000 enabled SAP Fiori apps with APS.

20% faster implementation cycles with VITA, the Atos Agentic AI Implementation Toolchain.

Atos AI Solutions for Industry and Line of Business.

“If you’re driving a digital journey, you need to have mature, reliable technologies and the right people with the capability to bring these technologies to life. Atos has the technologies and the people. They understand our processes and our key success factors. Atos is the great partner that will help us digitize the foundation”.

Dr. Stefan Henkel

CIO, Siemens Healthineers

Putting the focus on immediate and long-term value

With Atos comes full end-to-end consulting, implementation services, and support for SAP Business Suite deployments

Atos delivers full lifecycle value for SAP Business Suite, combining strategic consulting, rapid implementation, and intelligent managed services into a seamless transformation journey. With 35+ years of SAP expertise and proven accelerators, Atos is dedicated to helping you modernize faster, integrate AI and analytics with confidence, and sustain high performance through automated, data-driven support. Add in our Advanced Preconfigured Solutions (APS) that utilize both SAP and Atos best practices for jump-starting your S/4HANA strategic roadmap, and we can demonstrate an ability to accelerate SAP transformation journeys by an average 15-20%.

The 5 steps to SAP Business Suite

Atos's SAP Business Suite portfolio is built around five key offerings that help simplify the delivery of powerful capabilities in alignment with business strategy and deployment best practice.

01

Consulting & Advisory

- Conduct readiness and maturity assessments through
- Vision4Cloud - Business Transformation - S/4HANA Cloud Fitment Check (Public/Private) and Scope Items List based on quick capability matching
- Vision4Value - Process Transformation - Process benchmarking assessing process efficiency improvements and value from application rationalization for building the benefits case
- Vision4Future - Landscape Transformation - Assessment and Reporting on goals & roadmaps, business capability heatmaps, data flows and high-level integration strategy
- Drive fast and effective solution discovery and design with APS

02

Implementation Services: SAP Applications

Transform new and existing legacy ERP systems with

- SAP Cloud ERP Private (S/4HANA Private Cloud - RISE)
- SAP Cloud ERP (S/4HANA Public Cloud - GROW)
- SAP SaaS (SuccessFactors, Ariba etc.)
- Hyperscaler 'lift & shift' and Customer Data Center option
- Strong Organizational & Process Change Management

03

Insight Services: SAP Data & Analytics

- Migrate customer legacy data warehouses to SAP BDC
- Deliver real-time insights, intuitive dashboards, and context-rich reporting
- Maximize data value with the AI and ML capabilities of Databricks
- Integrate SAP with Data Lakes

04

Innovation Services: SAP Business AI

- Explore SAP embedded AI use-cases and business benefits
- Develop custom AI solutions for specific customer needs
- Leverage Atos Polaris and broader AI capabilities to deliver better value
- Apply Responsible AI and governance frameworks

05

Managed Services: SAP Support

- Deliver best-in-class apps management services leveraging AI and ML
- Zero human 1st line support through AI support agents
- AI user prompting for "time of need" training
- SAP Operations Partner for 20 years - awarded Golden Certificate status

Bringing value into focus

Atos Accelerators for SAP Business Suite

Atos's accelerators combine proven frameworks, industry expertise, and AI innovation to simplify SAP transformation, speed delivery, and unlock measurable business value. Designed to modernize core systems, unify data, and enable continuous improvement, they help organizations realize the full power of SAP Business Suite – faster, smarter, and with lasting impact.

With Atos accelerators, you can evolve SAP Business Suite implementation from a traditional, bespoke IT project to an insight-driven transformation journey that:

- **Delivers faster outcomes** (up to 50% time savings)
- **Reduces risk** via pre-tested templates and governance frameworks
- **Enhances innovation** through data, AI, and industry intelligence
- **Builds long-term resilience** by keeping the ERP core clean, scalable, and cloud-ready

Aligning outcomes to SAP capabilities

Business Accelerators

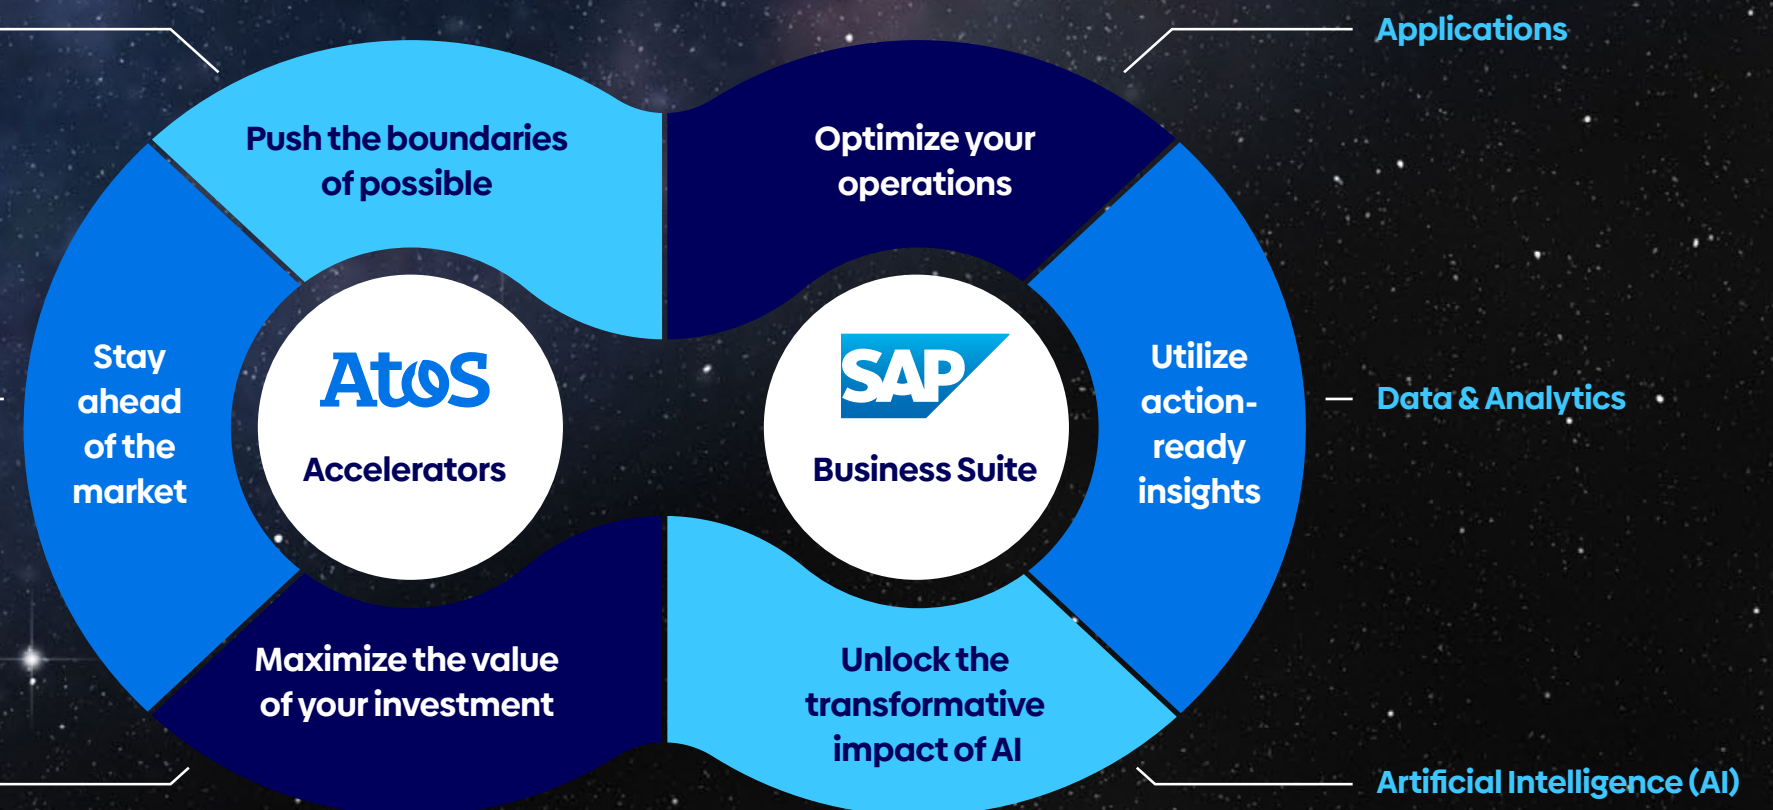

Pre-configured, cross-functional solutions built to accelerate value from the SAP Business Suite (and related SAP ecosystems) across core business domains – such as finance, HR, procurement, logistics, sales, sustainability, and IT operations.

Industry Accelerators

Pre-built, sector-specific solution packages built on top of SAP's platforms (such as SAP BTP, SAP S/4HANA) that incorporate industry best practices, domain workflows, regulatory frameworks, and vertical-specific micro-services.

Technology Accelerators

A set of toolkits, governance models, and automation assets designed to accelerate and standardize technical transformations in SAP environments – with the focus on enabling platform modernization, clean-core architecture, and efficient operations on the SAP BTP.

Take your SAP investments beyond standard

Business Accelerators

Project Management & Governance:

Atos Cost Guard extension for Cloud ALM Operations helps enhance project management through integrated financial oversight. This enables the financial health of SAP operations and projects to be tracked via real-time monitoring & scenario-based planning.

Human Resources / Workforce:

Reimagine your organization's HR processes and functions by moving to SAP SuccessFactors and our Enterprise Employee Experience Platform. Atos Work2Success simplifies data transfer from any HRIS platform to SAP SuccessFactors via a user-friendly interface, automation ensuring error-free migration.

Procurement & Supply Chain:

Catering for UN Sustainable Development Goals (SDG), and based on SAP Ariba Supplier Lifecycle & Performance Management (SLP) and SAP S/4 HANA procurement, our Green Procurement solution enables informed decision making and reporting on your suppliers' sustainability goals.

Logistics & Operations:

Templates and analytics for logistics execution, warehouse/inventory metrics, throughput optimization, and visibility across operations.

Sustainability & ESG:

Streamline ESG reporting with ease and efficiency by simplifying data collection, compliance tracking, and reporting. The solution works with SAP Sustainability Control Tower with guided data gathering, real-time compliance updates, customizable reports, analytics for sustainability insights, and an easy-to-use interface.

Technology Accelerators

Governance as a Service for SAP BTP:

Provides a structured management framework for the SAP Business Technology Platform (BTP), covering development authority, cost tracking, usage governance and lifecycle management of BTP extensions.

Agentic AI Implementation Toolchain for SAP:

Access AI Agents that autonomously deliver value in areas ranging from project management and task execution to knowledge support, governance, and risk.

AWS Data Lake Accelerator for SAP:

Jointly developed with AWS, this accelerator delivers a pre-built, end-to-end data platform for SAP and non-SAP data sources, including ingestion, transformation, modelling, and visualisation.

Clean-Core / Code-Analysis & Migration Frameworks:

Covering toolkits to analyse existing custom code, rationalise it, migrate or redevelop on side-by-side extensions, and ensure the ERP core remains standardised.

Cloud & Hyperscaler Ready SAP Platform Accelerators:

A framework for cloud-migration and platform modernization, with predefined patterns and reference architectures.

Industry Accelerators

Manufacturing & Supply Chain:

Closed Loop Manufacturing offers for Industry 4.0 architectures and integration with SAP IBP, SAP S/4HANA, SAP Digital Manufacturing, SAP BTP, SAP TeamCenter by Siemens, and AWS IOT.

Retail & Consumer Goods:

Accelerators for sustainable product design, omni-channel operations, supply-chain traceability and real-time inventory insights.

Public Sector & Defence:

Accelerators that incorporate regulatory compliance, citizen services, asset management and decarbonization workflows into the SAP environment.

Energy & Utilities:

"Waterpack" accelerators specifically developed for water supply companies providing integrated functionality for the entire water cycle process and value chain.

Healthcare & Life Sciences:

Accelerators that extend from patient-care workflows and integrated data ecosystems to digital services.

Delivering a competitive edge for Zentiva Pharmaceuticals

“There are many options for designing the SAP S/4HANA environment in Azure, so we needed experts who have expertise in both Azure and SAP. Atos’s expertise has proven key to implementing SAP S/4HANA in Azure and has provided innovative ideas and clear guidance in designing the right solution for us.”

Josef Matoušek

CIO, Zentiva Group

“The project was under considerable time pressure due to its high complexity in combination with the planned use of the new technology SAP S/4HANA and a very ambitious project planning. Only with very experienced and perfectly coordinated SAP consultants was this achievement successfully realizable”.

Herwig Wetzlinger

Deputy General Director, Vienna Healthcare Association

**Delivering the One.ERP
project: one of the largest
European SAP projects
in the healthcare sector**

Atos: Helping businesses go BEYOND with SAP

Atos is an SAP Platinum Partner and global leader in digital transformation. With leading positions in advanced computing, security, AI, and digital platforms, we use our deep domain experience to provide tailored secure, AI-powered, end-to-end solutions for all industries.

Atos's SAP services empower businesses to go beyond their current every day to become more resilient, secure, and sustainable data-driven intelligent enterprises. Our accelerated and simplified SAP S/4HANA adoption business solutions ensure seamless end-to-end business-, service-, and cloud transformations to unleash your full potential.

About Atos

Atos Group is a global leader in digital transformation with c. 67,000 employees and annual revenue of c. €10 billion, operating in 61 countries under two brands – Atos for services and Eviden for products. European number one in cybersecurity, cloud and high performance computing, Atos Group is committed to a secure and decarbonized future and provides tailored AI-powered, end-to-end solutions for all industries. Atos Group is the brand under which Atos SE (Societas Europaea) operates. Atos SE is listed on Euronext Paris.

The purpose of Atos is to help design the future of the information space. Its expertise and services support the development of knowledge, education and research in a multicultural approach and contribute to the development of scientific and technological excellence. Across the world, the Group enables its customers and employees, and members of societies at large to live, work and develop sustainably, in a safe and secure information space.
